Foreword

District Health Action Plan have assumed a new centrality and urgency in the Current Context of the National Rural Health Mission. The rationale for having District Health Action Plans comes from the concept of addressing local needs and local specificities of health and Nutrition in a district. Districts vary widely in their specific population needs and even more in innovations for intervention.

This District Health Action Plan (DHAP) is one of the key instruments to achieve NRHM goals. This plan is based on health needs of the district.

After a thorough situation analysis of district health scenario this document has been prepared. In the plan, it is addressing health care needs of rural poor especially women and children, the teams have analyzed the coverage of poor women and children with preventive and promotive interventions, barriers in access to health care and spread of human resources catering health needs in the district. The focus has also been given on current availability of health care infrastructure in public/NGO/private sector, availability of wide range of providers. This DHAP has been evolved through a participatory and consultative process, wherein community and other stakeholders have participated and ascertained their specific health needs in villages, problems in accessing health services, especially poor women and children at local level.

The goals of the Mission are to improve the availability of and access to quality health care by people, especially for those residing in rural areas, the poor, women and children.

I need to congratulate the department of Health and Family Welfare and State Health Society of Bihar for their dynamic leadership of the health sector reform programmes and we look forward to a rigorous and analytic documentation of their experiences so that we can learn from them and replicate successful strategies. I also appreciate their decision to invite consultants (NHSRC/ PHRN) to facilitate our District Program me Management Unit(DPMU) regarding preparation the DHAP. The proposed location of HSCs,APHCs, PHCs and its service area reorganized with the consent of ANM, AWW, male health worker and participation of community has finalized in the block level meeting.

I am sure that this excellent report will galvanize the leaders and administrators of the primary health care system in the district, enabling them to go into details of implementation based on lessons drawn from this study.

M. Sarvanan, IAS

(DM, Araria)

About the Profile

Health is now being given due attention by the State with the upgradation of Health infrastracture, manpower, outsource facilities, availibility of free medicines and througha mechanism of web-based monitoring, better health out comes realised in the District. By focusing on the outcomes and the associated key processes for the achievement of these outcomes. Under the National Rural Health Mission this District Health Action Plan of Araria district has been prepared. From this, situational analysis the study proceeds to make recommendations towards a policy on workforce management, with emphasis on organizational, motivational and capability building aspects. It recommends on how existing resources of manpower and materials can be optimally utilized and critical gaps identified and addressed. It looks at how the facilities at different levels can be structured and reorganized.

The information related to data and others used in this action plan is authentic and correct according to my knowledge as this has been provided by the concerned medical officers of every block. I am grateful to the state level consultants (NHSRC/PHRN),District Health Society Consultants, ACMO, MOICs, Block Health Managers , Block Community Mobilizer, ANMs and AWWs from their excellent effort we may be able to make this District Health Action Plan of Araria District.

I hope that this District Health Action Plan(2012-13) will fulfill the intended purpose.

Husne Ara Begum

(Civil Surgeon)
Araria

Introduction

Background

Keeping in view health as major concern in the process of economic and social development revitalization of health mechanism has long been recognized. In order to galvanize the various components of health system, National Rural Health Mission (NRHM) has been launched by Government of India with the objective to provide effective health care to rural population throughout the country with special focus on 18 states which have weak public health indicators and/or weak infrastructure. The mission aims to expedite achievements of policy goals by facilitating enhanced access and utilization of quality health services, with an emphasis on addressing equity and gender dimension. The specific objectives of the mission are:

- Reduction in child and maternal mortality
- Universal access to services for food and nutrition, sanitation and hygiene, safe drinking water
- Emphasis on services addressing women and child health; and universal immunization
- Prevention and control of communicable and non-communicable diseases, including locally endemic diseases
- Access to integrated comprehensive primary health care
- Revitalization local health traditions and mainstreaming of AYUSH
- Population stabilization

One of the main approaches of NRHM is to communities, which will entail transfer of funds, functions and functionaries to **Panchayati Raj Institutions** (PRIs) and also greater engagement of **Rogi Kalyan Samiti** (RKS). Improved management through capacity development is also suggested. Innovations in human resource management are one of the major challenges in making health services effectively available to the rural/tribal population. Thus, NRHM proposes ensured availability of locally resident health workers, multi-skilling of health workers and doctors and integration with private sector so as to optimally use human resources. Besides, the mission aims for making untied funds available at different levels of health care delivery system.

Core strategies of mission include decentralized public health management. This is supposed to be realized by implementation of District Health Action Plans (DHAPs) formulated through a participatory and bottom up planning process. DHAP enable village, block, district and state level to identify the gaps and constraints to improve services in regard to access, demand and quality of health care. In view with attainment of the objectives of NRHM, DHAP has been envisioned to be the principal instrument for planning, implementation and monitoring, formulated through a participatory and bottom

up planning process. NRHM-DHAP is anticipated as the cornerstone of all strategies and activities in the district.

For effective programme implementation NRHM adopts a synergistic approach as a key strategy for community based planning by relating health and diseases to other determinants of good health such as safe drinking water, hygiene and sanitation. Implicit in this approach is the need for situation analysis, stakeholder involvement in action planning, community mobilization, inter-sectoral convergence, partnership with Non Government Organizations (NGOs) and private sector, and increased local monitoring. The planning process demands stocktaking, followed by planning of actions by involving program functionaries and community representatives at district level.

Stakeholders in Process

- *Members of State and District Health Missions*
- *District and Block level programme managers, Medical Officers.*
- *State Programme Management Unit, District Programme Management Unit and Block*
  Program Management Unit Staff
- *Members of NGOs and civil society groups*
- *Support Organisation – PHRN and NHSRC*

Besides above referred groups, this document will also be found useful by health managers, academicians, faculty from training institutes and people engaged in programme implementation and monitoring and evaluation.

Objectives of the Process

The aim of this whole process is to prepare NRHM – DHAP based on the framework provided by NRHM-Ministry of Health and Family Welfare (MoHFW). Specific objectives of the process are:

To focus on critical health issues and concerns specifically among the most disadvantaged and under-served groups and attain consensus on feasible solutions

⇨ To identify performance gaps in existing health infrastructure and find out mechanism to fight the challenges

⇨ Lay emphasis on concept of inter-sectoral convergence by actively engaging a wide range of stakeholders from the community as well as different public and private sectors in the planning process

⇨ To identify priorities at the grassroots and curve out roles and responsibilities at block level in designing of DHAPs for need based implementation of NRHM

District Planning Process

The preliminary stage of the planning comprised of review of available literature and reports. Following this the research strategies, techniques and design of assessment tools were finalized. As a preparatory exercise for the formulation of DHAP secondary Health data were complied to perform a situational analysis.

Main Phase – Horizontal Integration of Vertical Programmes

The Government of the State of Bihar is engaged in the process of re – assessing the public healthcare system to arrive at policy options for developing and harnessing the available human resources to make impact on the health status of the people. As parts of this effort present study attempts to address the following three questions:

1. How adequate are the existing human and material resources at various levels of care (namely from sub – center level to district hospital level) in the state; and how optimally have they been deployed?

2. What factors contribute to or hinder the performance of the personnel in position at various levels of care?

3. What structural features of the health care system as it has evolved affect its utilization and the effectiveness?

With this in view the study proceeds to make recommendation towards workforce management with emphasis on organizational, motivational and capacity building aspects. It recommends on how existing resources of manpower and materials can be optimally utilized and critical gaps identified and addressed. It also commends at how the facilities at different levels can be structured and organized.

The study used a number of primary data components which includes collecting data from field through situation analysis format of facilities that was applied on all HSCs and PHCs of Vaishali district. In addition, a number of field visits and focal group discussions,

interviews with senior officials, Facility Survey were also conducted. All the draft recommendations on workforce management and rationalization of services were then discussed with employees and their associations, the officers of the state, district and block level, the medical profession and professional bodies and civil society. Based on these discussions the study group clarified and revised its recommendation and final report was finalized.

Government of India has launched National Rural Health Mission, which aims to integrate all the rural health services and to develop a sector based approach with effective intersectoral as well as intrasectoral coordination. To translate this into reality, concrete planning in terms of improving the service situation is envisaged as well as developing adequate capacities to provide those services. This includes health infrastructure, facilities, equipments and adequately skilled and placed manpower. District has been identified as the basic coordination unit for planning and administration, where it has been conceived that an effective coordination is envisaged to be possible.

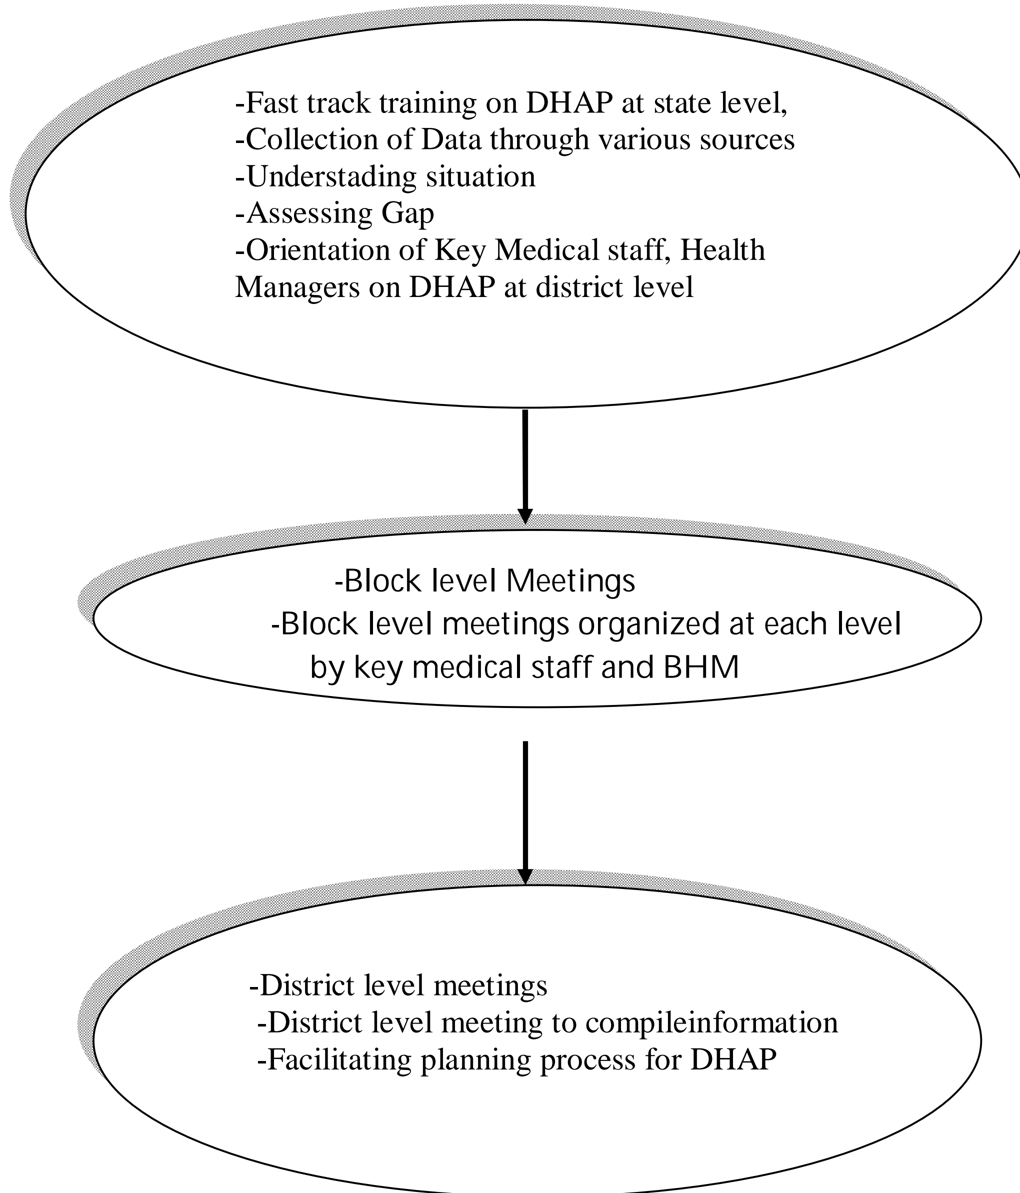
This Integrated Health Action Plan document of Araria district has been prepared on the said context.

Preparation of DHAP

The Plan has been prepared as a joint effort under the chairmanship of District Magistrate of the district, Civil Surgeon,District Health Society Consultants, ACMO (Nodal officer for DHAP formulation), all programme officers and NHSRC/PHRN as well as the MOICs, Block Health Managers, ANMs, as a result of a participatory processes as detailed below. After completion the DHAP, a meeting is organized by Civil Surgeon with all MOIC of the block and all programme officer. Then discussed and displayed prepared DHAP. If any comment has came from participants it has added then finalized. The field staffs of the department too have played a significant role. District Programme Manager, District Accounts Manager, District epidemiologist , District Planning Coordinator, District Data Assistant, & Data Entry Operator, have provided technical assistance in estimation and drafting of various components of this plan.
After a thorough situational analysis of district health scenario this document has been prepared. In the plan, it is addressing health care needs of rural poor especially women and children, the teams have analyzed the coverage of poor women and children with preventive and promotive interventions, barriers in access to health care and spread of human resources catering health needs in the district. The focus has also been given on current availability of health care infrastructure in pubic/NGO/private sector, availability of wide range of providers. This DHAP has been evolved through a participatory and consultative process, wherein community and other stakeholders have participated and ascertained their specific health needs in villages, problems in accessing health services, especially poor women and children at local level.

District Health Action Plan Planning Process

-



Historical Perspective

Araria District came into existence on the Makar-Sankranti day of 1990 after the bifurcation of the erstwhile Purnea district into three districts, Purnea itself, Araria and Kishanganj.

Araria has a very prestigious past though shrounded in midst of uncertainties. Some passages in the Mahabharata (Sabha Parva and Vana Parva) describing the conquest of Bhima in the eastern India furnish valuable information regarding the antiquity of the district.

In ancient times ruled by three important clans of Indian history Araria may be termed as a place of confluence of three entirely different cultures. The important tribe of Kiratas governed the northern side , while the eastern side was under the Pundras and area west of the river Kosi, at that time flowing somewhere near the present Araria, by Angas.

Angas are believed to be the earliest inhabitants of the district, mostly in the area west of the river Kosi and these are among the easternmost tribes as described in the Atharva-Samhita known to the Aryans. Pundras are said to be the descendents of Saint Vishwamitra. Whereas the Kiratas were among the few most important ruling clans of that time. It is said that Raja Virata of Mahabharata had married a Kiranti woman who was the sister of Raja Kichaka , King of Kiratas.

Manu regards the Kiratas as Kshatriyas. Mahadeva was associated with Kiratas and Bhima meets the Kiratas in the east of Mithila, i.e. the present Araria district. He is credited with having defeated seven of the Kirata rulers. Kiratas are described in the Kirata-Parva and Vana-Parva of Mahabharata and they were considered so powerful that even the Lord Shiva is said to have taken the form of a Kirata.

During the Mauryan period this area formed the part of the Mauryan Empire and according to Asokavadana the Emperor Asoka put to death many naked heretics of this area who had done despite to the Budhist religion. In later times the district formed

the part of the empire of Imperial Guptas.
In the sixth century A.D. the area south of the Himalayan pilgrim center of Varaha Kshetra, namely the Gupta kings Budhgupta and Devagupta gave Koti-varsha for the maintenance of the said pilgrim centre. Present district of Araria seems to be part of the Koti-varsa.
A brief account of this area and its people has been left by Huen-tsang, the famous Chinese traveler , who visited about 640 A.D. As he saw it had a flourishing population and was studded with tanks , hospices and flowering groves. The land was low and humid with abundant crops and genial climate.
According to the Ancient History of India by S. Beal the area west of the river Mahananda, i.e., the present Araria district was held by the Vrijis, a confederacy of tribes, who had come in from Nepal many centuries before.
At the beginning of 7th century the tract now included in the district seems to have been under Sasanka , the powerful king of Gauda. He was worshipper of Lord Shiva and hated Buddhism. He destroyed the Budhist convents and scattered the monks carrying his persecutions towards the Nepalese hills.
Harsha, the great Budhist ruler of 7th century defeated Sasanka. But after the death of Harsha it seems likely that Araria became a part of Magadhan Empire under Aditya sena. From the 9th to 12th century it was under the Pala kings and on their decline became subject to the Senas of Bengal.
At the end of 12th century the Muslims under Bakhtiyar Khilji burst down upon Bengal shaking Bihar. Bakhtiar removed the seat of government to Lakhnauti (Gaur) and from this centre Ghiasuddin Iwaz (1211-26) extended the area of Muslim control over the whole country called Gaur as well as Bihar and his rule was acknowledged by the surrounding tracts including Tirhut.
But it seems due to an impenetrable network of rivers interspersed with large patches of jungle, the area of Muslim control could not extend to the northern portion of the erstwhile Purnea district, i.e., the present Araria district. Hence the present Araria district seems still to have been held by the hill tribes of Nepal.
It was not less than the 18th century that it could be gained from the northern tribes. In the year 1738, the military governor of Purnea Nawab Saif Khan, son of an Afgan Amir, recovered the area north of the Jalalgarh fort up to Jogbani (i.e., the present Araria district) from the Rajput kings of Morung. Saif Khan appointed one Raja Nandlal as the administrator of the newly annexed area, who is credited to have built the temple of Lord Shiva at Madanpur.
Saif Khan after forcing the hill tribes back to the terai, cleared the jungles and brought the area under cultivation. He also defeated the Birnagar chief and subjugated his territory. Birnagar included the area west of river Kosi, presently the entire area under Raniganj and Bhargama blocks and some portion of Narpatganj.
In the year 1765 though the area came under the Dewani of East India Company, it was continued to be ruled by the Nawabs of Purnea till 1770. In the same year a British Supervisor, later to be known as District Magistrate and Collector Mr. G.G.Ducarrel was

posted and since then it has the same history as Purnea. But some special events related to the history of this area are worth mentioning.

When in 1738 Saif Khan annexed this area, i.e., the present Araria district, he gave it to the family of Purnea Raja, an old ruling family of this district. This family had its headquarters at Pahsara near Raniganj. They belonged to the Surgan Lauam family of Shrotriya Brahmins of Mithila. Maharaja Samar Singh was the founder of the family during the regime of Shah Jahan, the Mogul king of India. After Samar Singh his son Krishnadev became the ruler, followed by Vishwanath, Veernarayan, Narnarayan, Ramchandranarayan, and Indranarayan all having the title of Maharaja. Indra died in 1784. After his death his wife Maharani Indrawati became the ruler. She ruled till her death in 1803. The contemporary British writers have described her as one of the most able rulers. The area under her administration included the purganas of Sultanpur, Sripur, Nathpur, Gorari, Katihar, Gondwara, Tira Khardah, Asja and others.

Indrawati had built a beautiful palace at Pahsara, which now stands in ruins and a number of temples. One of these temples devoted to Lord Shiva is still present in the Basaiti village of Raniganj block.

In the year 1751 Maharaja Ramchandra of the same family gave the purganas of Tira Khardah (present Kursakata and Sikti blocks) and Asja (present Amour block of Purnea) to one Devanand, who distributed the two purganas between his two sons Parmanand alias Hajari getting Tira Khardah and Maniknanadan getting Asja. The present ex zemindars of Champanagar, Garhbanaili, Sultanganj and Srinagar (all part of the old Banaili Raj) are the descendents of Parmanand .

Maharani Indrawati died without child. After the death the succession of the family became disputed. Indrawati had adopted Bhaiyajee Jha, son of her maternal uncle, as her successor. But the descendents of Maharaja Samar's second son Raja Bhagirath of Sauriya branch put their claim over the large estate of Maharani and a quarrel issued.

In the year 1815 Raja Bhaiyajee Jha died having one son named Vijaygovinda, who became the Raja. Vijaygovinda had two sons Kumar Vijay Gopal Singh and Kumar Bhav Gopal Singh . But both died without a son. The quarrel of the succession ruined the large estate of Indrawati and in 1820 the estate was purchased by Babu Pratap Singh, banker of Murshidabad and Babu Nakchhed Lal grandfather of Raja P.C.Lal of Purnea City. Pratap Singh purchased entire Sultanpur and Sripur parganas. His descendents sold the pargana of Sultanpur to Alexander John Forbes.

A. J. Forbes was a military adventurer and had taken part in the adventures of Northwest India . He was also in the team of Commissioner Yule of Bhagalpur while fighting the rebels of 73rd native infantory.A. J. Forbes founded the Sultanpur estate and a number of indigo factories situated at different places in this district. The sub divisional town of Forbesganj is named after him. Due to its proximity with the international boundary of Nepal the problems from across the borders always have been a special concern for the administrators of this district. In the time of British rule the Nepalese sardars used to the subjects of this area.125

In 1770, Ducarrel the Supervisor or Collector at Purnea reported that Budhkaran who had been the Dewan of the deceased Raja Kamdat Singh of Morung was plundering the Company's frontiers and putting the subjects to flight. Ducarrel's suggestion was to extend the influence by rendering military assistance to Regonault who was opposing Budhkaran.
Depredations of the religious mendicants (Fakirs) was also one of the troubles from the north and above all it were the Dacoits who after committing crimes in this area took refuge in Morung. All these compelled the district administration to have a serious thought in regard of the problems from the north. Again in the year 1788 the collector of Purnea wrote to the board of revenue that the conquest of Morung by the Gorkhas in defiance of Mr. Hasting's order, the assassination of the young Raja and their repeated ravages on our frontier, that nothing but a decisive step will be sufficient to restrain them within their bounds. According to O'Malley the aggression of the Nepalese continued during the next century. In 1808 the Gorkha Governor of Morung seized the whole zamindari of Bheemnagar. This flagrant encroachment could not be over looked and in June 1809 a detachment of troops was sent from Purnea to the frontiers. Climax to all these happening was the Indo Nepalese war of 1811 – 12 and after this war the present boundary between Araria (India) and Nepal was determined.
In the first war of independence of 1857 Araria also witnessed a few skirmishes between the mutineers and the commissioner Yule's forces, which took place near Nathpur. In view of the 1857 episode and other developments regarding the law & order, in the year 1864 Araria was constituted as Sub-Division by merging the small divisions of Araria, Matiari, Dimia, parts of Haveli and Bahadurganj to provide better administration and ultimately it became a district in 1990.

Geographical Location

Araria District is located at 26°9' to 26°15' North latitude and 87°31' to 87°52' east longitude with attitude 47cm from sea level. The District is surrounded by Purnea District in south, Supaul & Madhepura District in west, Kishanganj is in east and International boarder with Nepal in North. The District is in semi tropical Gangetic plane. The District is spread over 2830 sq km area.

DISTRICT PROFILE

Length of highways and major district roads (mdrs) per thousand sq km in area (km) 31st march 2005	134.80km.
Length of rural roads per lakh population (km) 2004-05	
Length of rural roads per thousand sq km in area (km) 2004 – 05	
Number of branches of scheduled commercial banks 2008 – 09	57
Credit deposit ratio 2008(2009-10)	43.70
Density of livestock per sq km 2003	235
Density of poultry per sq km 2003	238.9
Average livestock population served per veterinary hospital/dispensary 2003	37002
District wise fish production 2007 – 08	2.81
Share of districts in total milk production 2007 – 08	50790960 Litrre.

RAINFALL AND FLOOD SITUATION

The district receives medium to heavy rainfall (average rainfall 1161 mm), and faces condition of severe flood. In the year 2008 flood condition was so bad that almost 71 gram panchayats and 124 villages got marooned. Narpatganj and Bhargama blocks were the worst affected blocks. According to the estimates of National Disaster Management Department, in the year 2008, 626062 people were directly affected by the floods. Crops were damaged and there was irreparable damage to property and huge loss of lives. The economic loss due to floods this year amount to Rs. 65 Crore of crope loss, Rs . 25 Crore of housing loss and Rs. 27 Crore of property loss. The district has poor drainage system and nearly 4% of the area is water logged.

The district is spread over 2830 sq. Km. area with no forest cover. 65.43% of the land is agricultural and nearly 67% of the area under cultivation is irrigated. Araria district is also affected by droughts. Cycles of flood and droughts severally affected the flood production and flood distribution system and lead to distressful situation for most people.

LAND AND SOIL:

The district has, by and large, alluvial and sandy soil with a varying nature of acetic or basis. Thought it is deficient in mineral such as Sodium, Potassium and Magnessium, it can be supplemented with suitable fertilizers. The soil is suitable for paddy, wheat, pulses, vegetable and jute

SOCIAL STRUCTURE:

Socio –Economic profile

Social

●Araria district has a strong hold of tradition with a high value placed on joint family Kinship. Religion, caste and community.

●The village of Araria have old social hierarchies and caste equations still shape the local development. The society is feudal and caste ridden.

●13.7% of the population belongs to SC and 1.3% to ST. There are at least 13% village where the SC population is more than 40%. Some of the most backward communities are Mushahar, Turha, Mallah and Dome.

Economy

Araria mainly depends on agriculture, with paddy, maize and jute as the major agriculture products. There are also many jute mills in Araria. This area contain many ponds, canal and rivers, fisheries is one good source. Somewhere Makhana production can be seen easily. However Araria has big name for the Plywood Industries. In recent year such industries are losing their production volume due to many factors related with timber. Almost 20% of the youth

population migrates in search of jobs to the metropolitan cities like Delhi, Punjab, Haryana etc.

FACT SHEET OF BLOCKS AND URBAN LOCAL BODIES:

Name of Sub Divisions	Name of the Blocks	Total Population	No. of GP	No. of Revenue	% of Total Literates	% of Male Literates	% of Female Literates	% of SC Population	% of ST Population	Sex Ratio

HEALTH PROFILE

General Status of health in Araria district

In a study of 513 districts of the country (Jansankhya Sthirata Kosh", www.jsk.gov.in) in terms of overall rank in health it was found that Araria district ranks 549 though on the basis of under-five mortality it ranked 507 Filaria, Malaria, Dengue, Kala-azar, skin diseases, and Tuberculosis are some of the most common diseases in Araria district. Hepatitis, Diarrhea, Typhoid, Blindness and Leprosy are other high prevalence diseases. Kala-azar is an endemic problem in Bihar. As per DLHS 2002-2004 the prevalence percentage of kala-azar is 11.4 % and TB is 4.3 %. The overall prevalence of tuberculosis in India is .... per 100,000 populations while in Araria it is reported to be close to 618 per 100,000 (RCH, Round 2).

Infant Mortality Rate (IMR) and Child Mortality Rate (CMR)

Indicators	Rural			Urban			Total			
	M	F	T	M	F	T	M	F	T	
Infant Mortality Rate	-	-	-	-	-	-	-		71	Araria
	56	60	58	41	42	42	55	58	57	Bihar
										India
Child Mortality Rate	-	-	-	-	-	-	-	-	-	Araria
	59	**69**	**64**	**42**	**46**	**44**	**57**	**66**	**62**	Bihar India

Source: Population Foundation of India May 2008

The table gives the estimates of infant mortality rates and child mortality rates of Araria and compared with the data of Bihar. **IMR in rural areas are higher than the urban areas**. **Also CMR in rural areas is higher than in urban areas .** The differential ratio of infant mortality rate of male/female is 0.7 and rural/urban is 1.4. The differential ratio of child mortality rate of male/female is 0.8 and rural/urban is 1.5.

HEALTH STATUS AND BURDEN OF DISEASE

CASE FATALITY RATE					
S.No.		**2007**	**2008(Till Nov)**		
	Disease	**Case**	**Death**	**Case**	**Death**
1	Gastroenteritis	67	6	166	0
2	Diarrhea/Dysentery	1515	5	882	2
3	Cholera	0	0	0	0
4	Meningitis	0	0	0	0
5	Jaundice	0	0	0	0
6	Tetanus	0	0	0	0
7	Kala-azar	3275	6	2632	3
8	Malaria	0	0	0	0
9	Measles	0	0	0	0
10	A.R.I.	NA	NA	NA	NA

MORBIDITY DUE TO MAJOR DISEASE			
Sl.No.	Disease	2007	2008
1	Kala-azar	3275	2632
2	T.B. (NSP)	724	643
3	Leprosy (PR/10000)	1.15	1.30

BASIC HEALTH STATUS INDICATORS OF ARARIA DISTRICT		
Indicators	Araria	Bihar
Couple Protection Rate (CPR)	33%	
Crude Death Rate (CDR)	8.1	8.1
Crude Birth Rate	31.9	30.4
Infant Mortality Rate	61	61
Maternal Mortality Rate	371	371
Total Fertility Rate (TFR)	4.6	4
Under 5 Mortality Rate	85	85
Still Birth Rate	NA	NA
Abortion rate	NA	NA

DENOTING PRIORITY AREAS IN EACH OF THE BLOCK	
Block	Hard to Reach area
Narpatganj	Whole Narpatganj block (72 villages)
Bhargama	Village Bahlolpur
Sikti	Two villages

Note: During raining season i.e. From mid June to September almost 80 percent of the villages become hard to reach area.

PUBLIC HEALTH CARE DELIVERY SYSTEM: ORGANISATIONAL STRUCTURE AND INFRASTRUCTURETable HEALTH CARE INSTITUTIONS IN THE DISTRICT

S.No.	Type of Institutions	Number	No. of Beds*
1	District Hospital	1	100
2	Sub.Divisional Hospital	1	32
3	Referal	3	90
4	Block PHCs	06	36
5	APHCs	32	0
6	Sub-centres	199	0
7	Ayurvedic Dispensaries	02	0
8	Anganwadi Centres	2125	-
9	Others (Pvt. Facility accredited)	NIL	NIL

DISTRIBUTION OF PUBLIC HEALTH FACILITIES IN DISTRICT				
District Hospital	Sub-Div. Hospital	Community Health Centres	Block PHC	Referral Hospital

SWOT analysis of Part A,B,C,D

SWOT Analysis of Part A

Strength

- Decentralized Planning and availability of Resources and Fund for program till HSC level.
- Huge pool of Human Resource working at ground level as ANM, Asha and Anganwadi workers.
- Provision of incentive money for Asha, ANM according to their performance in mobilizing community for institutional delivery ,FP etc.
- Provision of Incentive money for beneficiary under JBSY, Family Planning.
- Extension of emergency facilities in remote rural areas and posting of skilled doctors.
- Regular training program of doctors and other medical staffs for skill up gradation.
- Strong provision of IEC and BCC activity under the programs for effective program implementation and sensitizing people.
- Decentralized implementation process of the entire program.
- Involvement of people in uplifting health facilities through RKS and VHSC.

Weakness

- All PHCs are with only six bedded facility.50-60% of facilities are not adequate as per IPHS norms for providing emergency care.
- Lack of doctors and other human resource in the remote areas medical facilities
- Achievements in most of the program are far less than target.
- Slow pace of most of training like SBA and IMNCI.
- Monthly VHND is not operational as yet.
- Institutional delivery is still less than 50% in the district.
- No NRC has been made operational in the district.
- Seat for contractual medical officer and specialist, ANM and ASHA are still vacant.
- Achievements in Family Planning and IUD insertation are far less than targets.
- Insensitivity of Doctors and other health staffs for patients.
- Unavailability of doctors and staffs in hospital at the time of duty.

No timely procurement of equipments and drug in the remote health facilities.

Opportunity

- All the time support from state health society for all financial and logistics requirements for program implementation
- Scope for involving Private partner like Surya clinic for timely achievement of targets.

- Scope of getting full support from people through their participation in RKS and VHSC.
- Favourable political and administrative environment for program implementation
- Increasing literacy and awareness among public to support Family planning and institutional deliveries.

Better coordination and support from other line departments like ICDS, Municipality etc

Threat

- Large scale poverty becomes the cause of nutritional deficiency leading to health problems.
- In case of remaining without practice for long time health staff training become useless.
- Extending services in remote rural areas is still a challenge in achieving targets of MCH and FP, RI.

Traditional and religious attitude of public is hindrance for increasing Institutional deliveries, Family planning etc.

SWOT Analysis of Part B

Strength

- ASHA support system with DCM and BCM has been made functional in the district.
- Motivational program for ASHA like Umbrella distribution is completed in time.
- Formation of VHSC has been completed in most villages of the district.
- Deployment of BHM and Hospital Managers is complete at all the vacant places in the district.
- Services of advanced life saving ambulance (108) is started in the district
- Contractual AYUS doctors have been placed in APHC.

Decentralized planning at HSC level has been started from this year in the district

Weakness

- ASHA Selection is not 100% complete
- RKS is not function in any APHC.
- Utilization of untied fund in most of the health centers is very less.
- Replenishment of ASHA kit and drugs is not timely and complete.
- Construction of HSC, APHC, PHC buildings and staff quarters moving with very slow pace.
- ISO certification process of health facilities is still to start in the district.
- Pathology and Radiology services under PPP initiatives are not properly functional at most of the health facilities.

Lack of orientation among members of RKS regarding their scope of works for Health facilities.

Opportunity

- Participation of Mukhiya and Sarpanch in ASHA selection process to expedite the process and also proper and complete utilization of Untied fund for health facility development.
- Favorable administrative and political condition for program implementation.
- Availability of fund from both NRHM and State funding for development of health infrastructure.

Threat

- Corruption and ill intention in construction of buildings and selection process of employees.
- Lack of people interest and support for proper maintenance of health infrastructure and quality of services.
- Less knowledge and sensitivity for work among Asha and other contractual employees.
- Not immediately filling vacant positions Specialist Doctors of.

SWOT Analysis of Part C- Routine Immunization

Strength

- Properly and timely formation of block micro plan of RI.
- Availability and involvement of large human work force in form of ANM and ASHA.
- Functioning of one separate dept. in health sector to look after RI.
- Timely availability of vaccines.

Abundance of fund for all kind of review meeting and supervision of the program.

Weakness

- Low achievement against the fixed targets.
- Poor cold chain maintenance.
- Handling of cold chain-deep freezers by untrained persons.
- Poor public mobilization by ANM and ASHA.
- Poor or false reporting data from block and sub centers.
- Quarterly review meeting at district and blocks are not happening regularly.

Unavailability or non use of RI logistics like red/black bag, twin bucket etc

Opportunity

- Support from UNICEF and other development agencies in RI.
- Proper coordination and support from Anganwadi –ICDS dept.
- Growing awareness among people regarding immunization.

Threat

- Sudden outbreak of epidemic.
- Corruption in program implementation.

Integrated Disease Surveillance Project

Surveillance is essential for the early detection of emerging (new) or re-emerging (resurgent) infectious diseases. In the absence of surveillance, disease may spread unrecognized by those responsible for health care or public health agencies, because many individual health care workers would see sick people in small numbers. By the time the outbreak is recognized, it may be too late for intervention measures. Continuous monitoring is essential for detecting the 'early signals' of outbreak of any epidemic of a new or resurgent disease. For disease surveillance to prevent emerging epidemics, the time taken for effective action should be short.

Integrated Disease Surveillance Program (IDSP) is intended to be the backbone of public health delivery system in the state. It is expected to provide essential data to monitor progress of on- going disease control programs and help in optimizing the allocation of resources. It will be able to detect early warning signals of impending outbreaks and help initiate an effective and timely response. IDSP will also facilitate the study of disease patterns in the state and identify new emerging diseases. It will play a crucial role in obtaining political and public support for the health programs in the state.

Major Components of the project

1)Integration and Decentralization of Surveillance activities
2)Strengthening of Public Health Laboratories
3)Human Resource Development - Training of SSO, DSO, RRT, other medical and paramedical staff
4)Use of Information Technology for collection, compilation, analysis & dissemination of data

Response Mechanism

The multidisciplinary Rapid Response Team (RRT) constituted/ trained at all State and district headquarters; comprises of:

(1)One Public Health Expert - Epidemiologist/(District Surveillance Officer/ Faculty of Community Medicine), One Clinician, One Microbiologist/ Lab personnel, One Entomologist (for Vector Borne Diseases)

(2)Video Conferencing for interaction on outbreak investigations.

(3)Purposes of data analysis important

(4)Identifying outbreaks / Potential outbreaks (alert the health services system) e.g. a case of measles
should alert health care services system

(5)Identifying High-risk population groups (person/place) so that targeted intervention can be provided

(6)Identifying regional differences for improving services (e.g. measles: low vaccination in a area)

(7)Predicting changes in disease trends over time (prevention/IEC)

(8)Identifying problems in health systems so that gaps can be effectively plugged (e.g. possibility of increased vector density/poor mosquito control/migration of infected people to the region)

Importance

The importance of health in economic and social development for improving the quality of life has long been recognized. In order to energize the various components of health system, Government of India has launched the Integrated Disease Surveillance Project. This was launched in Nov 2004, to provide effective health care to the rural & urban population throughout the country with special focus on states which have weak public health indicators and/or weak infrastructure.

IDSP to support data collection, analysis and other functions at district, state and central surveillance unit under information and communication technology being implemented by the national informatics corporation.

Objectives

Specific objectives are to establish a decentralized based system of surveillance for communicable and non-communicable disease so that well-timed and effective and preventive public health care actions can be initiated in response to changes and improve the health care in the rural & urban settings.

As well as to amalgamate existing surveillance approach to avoid replication and communicate information across each & every disease control program and other stakeholders so that actual information is available for health decision making in the bottom to the top level surveillance unit.

Diseases conditions under the surveillance program

Regular Surveillance:

Vector Borne Disease:	Malaria & Kala-azar
Water Borne Disease:	Acute Diarrhoeal Disease (Cholera) & Typhoid
Respiratory Diseases:	Tuberculosis
Vaccine Preventable Diseases:	Measles
Diseases under eradication:	Polio
Other Conditions:	Road Traffic Accidents

BUDGET FOR DISTRICT ACTION PLAN FOR DISTRICT SURVEILLANCE UNIT, IDSP, ARARIA				
Issues & Objectives:				
EFFECTIVE IMPLEMENTATION OF DISTRICT SURVEILLANCE UNIT, IDSP AND MAKE A BETTER APPROACH OF PUBLIC HEALTH AS WELL AS DISEASE PREVENTIVE SYSTEMS & CONTROL MEASURES.				
Stratagem	**Approach & actions**	**Unit**	**Unit Cost**	**Total Cost (in Rs.)**
(A)SALARY STRUCTURE OF IDSP PERSONNEL	**(1) DISTRICT EPIDEMIOLOGIST**	**12 MONTH**	**40,000**	**4,80,000**
	(2) DISTRICT DATA MANAGER	**12MONTH**	**30,000**	**3,60,000**

(I) PROCUREMENT OF ESSENTIALS GOODS	LAPTOP & ASSESSIRIES	2		1,50,000
	PHOTO COPIER/XEROX MACHINE	1		1,50,000
	FAX WITH PHONECONNECTION	1		25,000
	GRAND TOTAL:		AMOUNT Rs:=	68,05,200

Situational Analysis of district

In the present situational analysis of the blocks of district Araria the vital statistics or the indicators that measure aspects of health/ life such as number of births, deaths, fertility etc. have been referred from census 2001, report of District Health Society & Health Office, Araria and various websites as well as other sources. These indicators help in pointing to the health scenario in Araria from a quantitative point of view, while they cannot by themselves provide a complete picture of the status of health in the district. However, it is useful to have outcome data to map the effectiveness of public investment in health. Further, when data pertaining to vital rates are analyzed in conjunction with demographic measures, such as sex ratio and mean age of marriage, they throw valuable light on gender dimension.

Table below indicates the Health indicators of Araria district with respect to Bihar and India as a whole.

Health Indicators

Indicator	Araria	**Bihar**	**India**
CBR#	36.2	30.4	23.8 (SRS 2005)
CDR#	8.80	8.1	7.6
IMR#	71	61	58 (SRS 2005)
MMR#	-	400	301

Internal MIS data, SRS 2005

Availability of facilities and location of facilities

As per existing norms one HSC is planned for every 5000 population and for tribal areas the 3000 population, one APHC for every 30,000 population and for tribal area 20,000 population one PHC for every 1, 20,000 population.

The number of gap is in the number of sectors without HSCs, without APHC, we have major gap in PHC where in practice the norm followed is one PHC per administrative block. There is no PHC in the Bihar. Amongst existing facilities there is considerable loss of utilization due to improper location and improper distribution. And this is compounded by improper choice of village within the section or sector and the choice of venue within the village. Sub centers were most affected by such poor location. The existing process of choice of venue is flawed and a specific alternative policy on this is required.

Gaps in Health Infrastructure

It is required to prepare block level maps showing all villages with location of existing HSCs and APHC and its service area in all blocks as well as demarcating various sections and sectors according to population norms fixed for areas with tribal, primitive population and non tribal populations. Based on this to search out ideal locations for HSCs and APHC as and compare this to where they are currently. The location of proposed HSCs and APHC are effectively done by based on GIS. So apart from constructing the requisite number of new sub - centers we also need to either construct buildings for these 199 old HSCs and 225 new HSCs or we can take over the existing building from where they are functioning from and upgrade and equip them sub-centre requirements. The district and block level team has discussed and finalized the location of the new sub centers with the help of community, local administration and health service providers with the help of GIS map.

To ensure one progress of any district, it is important to ensure that its people are healthy and have round the clock easy access to adequate health infrastructure. 32 APHC and 199 HSCs are functioning in the district. The block wise details are as follows:

Block wise health infrastructure details of Araria district

Blocks	Population covered	PHC Existing (In No.)	APHC Existing (In No.)	HSCs Existing (In No.)
Araria	464360	01	05	22

6	Narpatganj	Ambulance	01	Good
7	Forbesgaj	Ambulance	02	Good
8	Bhargama	Ambulance	01	Good
9	Raniganj	Ambulance	01	Good
Total			11	

The gaps in accommodation are huge. APHC do not have the required number of quarters for Doctors as well as nurses (Table annexed). Whatever the existing quarters are there, they are in a very poor condition. There is acute shortage of quarters for Paramedics and other staff at all the APHC. In the campus residential accommodation for all staff is required not just for few is very necessary if we really want to have our PHC working for 24 hours a day and 7 days a week.

Most of the quarters for the Doctors, Nurses, paramedics and other staff needs to be immediately renovated and quarters need to be constructed according to the minimum manpower norms for PHC.

As far as 32 APHC are concerned, all APHCs are functioning without any facilities with damaged building. Either functioning in the sub-centre building. Almost 08 APHCs are functioning in government buildings, but building condition is very poor. All APHC are devoid of electricity, lacking of water supply because Hand pumps are not functioning properly. There are no residential facilities for staff in APHCs except Jogbani APHC in Forbesganj.

Out of 199 existing Health Sub-Centre, 49 HSCs are running in Government building, 150 HSCs are running without building. 25 HSCs building is under construction, rest are in poor condition and immediately renovation / new constructions are required. As per population norms and geographical conditions 225 new more sub-centers are required

to provide better health facility to the community. The total number of new buildings is required 364 others are renovated i.e. 35 HSCs.

Infrastructure: Current Status and Gap

HSCs Gaps, Issues and Strategy

Health Sub Centers: Total population of the district as per 2001 census is 2158608 but 29,57774 is the expected population by the year 2010. After considering projected population in 2010, the district needs altogether 637 HSCs to cater its whole population. At present Araria has 199 established Health Sub Centers and 392 more Health sub centers are proposed to be formed. As per the IPHS norms (5000 population in plain area) the district still requires 392 new HSCs to be formed. Again, out of 199 established HSCs, only 77 have their own buildings and rest 122 having no building. All these 20 HSCs Need renovation work. All the above mentioned HSCs need equipments, drugs, furniture and stationeries.

Health Sub Centers:				
Sub Heads	**Gaps**	**Issues**	**Strategy**	**Activities**
Infrastructure	A. Out of 199 HSCs only 77 are having own building	In adequate facility in constructed building and lack of community ownership	Enhance visibility of HSC through hardware activity by the help of community participation	**Strengthening of HSCs having own buildings**
	B. In existing 77 buildings 57 are in running comparatively in good condition,			B.1.White washing of HSC buildings. B.2.Organize adolescent girls for wall painting and plantation./hire local painter for colure full painting of HSC walls. List out all services which is provided at HSC level. On the wall. B.3.Gardening in HSC premises by school children.
	C.No one building is having running water and electric supply.			C. Mobilize running water facility from near by house if they have bore well and water storage facility and it could be on monthly rental.
	D. Lack of equipments and ANM are reluctant to keep all equipments in HSC . E. Lack of	Operational problem in availability of equipment in constructed HSC		D.1.Purchase of Furniture Prioritizing the equipment list according to service delivery(for ANC /Family planning /Immunization/) D.2. Purchase of

	appropriate furniture			equipments according to services Purchase one almirah for keep all equipment safely and it could be keep in AWW / ASHA house.
	1.Non payment of Rent of HSCs	1.Non payment of rent	Regularizing rent payment	**3B. Strengthening of HSCs running in rented buildings.** B1. Estimation of backlog rent and facilitate the backlog payment within two months B2. Streamlining the payment of rent through untied fund from the month of April 09. B3.Purchase of Furniture as per need B4 Prioritizing the equipment list according to service delivery B5 Purchase of equipments as per need B6 Printing of formats and purchase of stationeries
	1.The district still Needs392 more HSCs to be formed.	1. Land Availability for new construction 2. Constraint in transfer of constructed building		**3C. Construction of new HSCs** C1. Preparation of PHC wise priority list of HScs according to IPHS population and location norms of HScs C2. Community mobilization for promoting land donations at accessible locations. C3. Construction of New HSC buildings C4. Meeting with local PRI /CO/BDO/Police Inspector in smooth transfer of constructed HSC buildings.
	Non participation of Community in monitoring construction work	Monitoring	Ensuring community Monitoring	1. Biannual facility survey of HSCs through local NGOs as per IPHS format

				2. Regular monitoring of HSCs facilities through PHC level supervisors in IPHS format. 3. Monitoring of renovation/construction works through VHSC members/ Mothers committees/VECs/others as implemented in Bihar Education Project. 4. Training of VHSC/Mothers committees/VECs/Others on technical monitoring aspects of construction work. 5. Monthly Meeting of one representative of VHSC/Mothers committees on construction work
	1. Lack of community ownership .	1.Community ownership	Strengthening of VHSCs, PRI	1.Formation and strengthening of VHSCs, Mothers committees, 2.“Swasthya Kendra chalo abhiyan” to strengthen community ownership 3.Nukkad Nataks on Citizen’s charter of HSCs as per IPHS 4.Monthly meetings of VHSCs, Mothers Committees
Service performance	Unutilized untied fund at HSC level	Operationalization of Untied fund	Capacity building of account holder of untied fund	1.Training of signatories on operating Untied fund account, book keeping etc 2. Timely disbursement of untied fund for HSCs 3. Hiring a person at PHC level for managing accounts

	ANC at HSC level not done properly due to lack of infrastructure	Improvement in quality of services like ANC, NC and PNC, Immunization	Strengthening one HSC per PHC for institutional delivery in first quarter	1. Identification of the best HSC on service delivery 2.Listing of required equipments and medicines as per IPHS norms 3. Purchasing/ indenting according to 31 the list prepared 4.Honouring first delivered baby and ANM
		Improvement in quality of services like ANC, NC and PNC, Immunization and family planning	1.Phase wise strengthening of 2 HSCs for Institutional delivery and fix a day for ANC as per IPHS norms. 2. Community focused family planning services	1 Gap identification of 2 HSCs through facility survey 2. Eligible Couple Survey 3. Ensuring supply of contraceptives with three month's buffer stock at HSCs. 4. training of AWW/ASHA on family planning methods and RTI/STI/HIV/AIDS 5. Training of ANMs on IUD insertion
	Lack of counseling services	Training	Training	1.Training to ANMs on ANC, NC and PNC, Immunization, Breastfeeding and other services.
	HSC unable to implement disease control programs	Integration of disease control programs at HSC level.	Implementation of disease control programs through HSC level	1 Review of all disease control programs HSC wise in existing Tuesday weekly meetings at PHC with form 6.(four to five HSC per week) 2.Strengthening ANMs for community based planning of all national disease control program 3. Reporting of disease control activities through ANMs

				4. Submission of reports of national programs by the supervisors duly signed by the respective ANMs.
			Lack of Cleaner	Recruitment of Cleaner through RKS on Contract
	80% of the HSC staffs do not reside at place of posting	Absence of staffs	Community Monitoring	1. Submission of absentees through PRI
	Problem of mobility during rainy season and during flood.	Communication and safety		1.Purchasing Life saving jackets for all field staffs 2. Providing incentives to the ANMs during rainy season so that they can use local boats.
	Lack of convergence at HSC level	Convergence	Convergence	1. Fixed Saturday for meeting day of ANM, AWW, ASHA,LRG with VHSCs rotation wise at all villages of the respective HSC. 2. Monthly Video shows in all schools of the concerned HSC area schools on health , nutrition and sanitation issues.
	Lack of proper timely reporting from field Lack of appropriate HMIS formats .	Reporting	Strengthening of reporting system	1.Training to the field staffs in filling up form 6, Form 2, Immunization report format, MCH registers, Muskan achievement reports etc 2.Printing of adequate number of reporting formats and registers 3.Hiring consultants to develop softwares for reporting. 4.Establish data centre at APHC which will monitor all HSC
Human	1.100% HSC have	Filling up the staff	Staff	1.Selection and

Resource	either ANMs or Male worker, 2.Out of 45 sanctioned post of LHVs only 8 are placed	shortage	Recruitment	recruitment of ANMs 2.Selection and recruitment of male workers
	1.Out of 430(senctioned564) ANMs 148 Are trained on different services.	1.Out of 430 ANMs 148 Are trained on different services.	Capacity Building	1.Training need Assessment of HSC level staffs 2.Training of staffs on various services
	Lacks adequate number of trainers, staffs and facilities	Training	Oppening of ANM training school	2.Deployment of required staffs/trainers 3.Hiring of trainers as per need 4.Preparation of annual training calendar issue wise as per guideline of Govt of India. 5.Allocation of fund and operationalization of allocated fund
Drug kit availability	1.No drug kit as such for the HSCs as per IPHS norms.(KitA, Kit B, drugs for delivery, drug for national disease control program (DDT, MDT, DOTs, DECs)and contraceptives, 2.No Drug kit for AWC/ASHA@one kit per	Indenting	Strengthening of reporting process and indenting through form 6	1.Weekly meeting of HSC staffs at PHC for promoting HSC staffs for regular and timely submission of indents of drugs/ vaccines according to services and reports

	annum,) t			
	Only need based emergency supply Irregular supply of drugs	Logistics		1.Ensuring supply of Kit A and Kit B biannually through Developing PHC wise logistics route map 2.Hiring vehicles for supply of drug kits through untied fund. 3.Developing three coloured indenting format for the HSC to PHC(First reminder-Green, Second reminder-Yellow, Third reminder-Red)
		Operationalization	Couriers for vaccine and other drugs supply	1 Hiring of couriers as per need 2 Payment of courier through ANMs account
			Phase wise strengthening of APHCs for vaccine / drugs storage	1.Purchasing of cold chain equipments as per IPHS norms 2. training of concerned staffs on cold chain maintenance and drug storage

Additional PHCs Status

Additional PHCs:				
Sub Heads	**Gaps**	**Issues**	**Strategy**	**Activities**
Infrastructure	1.The district altogether need 197 APHCs but there are only 32 APHCs functioning in the district . 2. 41 more are proposed to be established. 3.Out of 32 APHCs only 11 are having own building 4.Non payment of rent of APHCs for more than few years Lack of equipments, Non availability of HMIS formats/registers and stationeries 5. PHCs doesn't have boundary walls resulting PHC Premises Safe heaven for Astray animals and Trespasser	Lack of facilities/ basic amenities in the constructed buildings Non payment of rent Land Availability for new construction Constraint in transfer of constructed building . Lack of community ownership	Strengthening of VHSCs, PRI and formation of RKS Strengthening of Infrastructure and operationalization of construction works in Three phase	1."Swasthya Kendra chalo abhiyan" to strengthen community ownership 2.Nukkad Nataks on Citizen's charter of APHCs as per IPHS 3. Registration of RKS 4.Monthly meetings of VHSCs, Mothers committees and RKS **A.Strengtheing of APHCs having own buildings** A.1 Prioritizing the equipment list according to service delivery A.2 Purchase of equipments A.3 Printing of formats and purchase of stationeries **B. Strengthening of APHCs running in rented buildings.** B1. Estimation of backlog rent and facilitate the backlog payment within two months B2. Streamlining the payment of rent through untied fund/ RKS from t he month of April 09. B3 Prioritizing the equipment list according to service delivery B4 Purchase of equipments as per need B5 Printing of formats and purchase of stationeries 3C. Construction of new APHC buildings as standard layout of IPHS norms.

				C1. Preparation of PHC wise priority list of APHCs according to IPHS population and location norms of APHCs C2. Community mobilization for promoting land donations at accessible locations. C3. Construction of New APHC buildings C4. Meeting with local PRI /CO/BDO/Police Inspector in smooth transfer of constructed APHCs buildings. 4 Biannual facility survey of APHCs through local NGOs as per IPHS format
			Monitoring	4.1 Regular monitoring of APHCs facilities through PHC level supervisors in IPHS format. 4.2 Monitoring of renovation/construction works through VHSC members/ Mothers committees/VECs/others as implemented in Bihar Education Project. 4.3 Training of VHSC/Mothers committees/VECs/Others on technical monitoring aspects of construction work. 4.4 Monthly Meeting of one representative of VHSC/Mothers committees on construction work.
Human Resource	Out of 32 APHCs 5. doesn't have doctors, 10 doen't have A grade	Filling up the staff shortage Untrained staffs	Staff recruitment	1.Selection and recruitment of .Doctors/Grade A

	nurse, 4.doesn,t have ANMs,. Hospital campus, lacks adequate number of trainers, staffs and facilities Most of the APHC staffs are deputed to respective PHCS hence APHCS are defunct		Capacity building Strengthening of ANM training school	nurse/ANMs 2.Selection and recruitment of male workers 3. Sending back the staffs to their own APHCs. 1. Training need Assessment of APHC level staffs 2. Training of staffs on various services 3. EmoC Training to at least one doctor of each APHC 1. Analyzing gaps with training school 2. Deployment of required staffs/trainers 3. Hiring of trainers as per need 4. Preparation of annual training calendar issue wise as per guideline of Govt of India. 5. Allocation of fund and operationalization 42 of allocated fund
Drug kit Availability	No drug kit as such for the APHCs as per IPHS norms.(KitA, Kit B, drugs for delivery, drug for national disease control program (DDT, MDT, DOTs, DECs)and contraceptives, Only need based	Indenting Logistics Operationalization	Strengthening of reporting process and indenting through form 2 and 6 Couriers for vaccine and other drugs supply Phase wise strengthening of	1.Weekly meeting of APHC staffs at PHC for promoting APHC staffs for regular and timely submission of indents of drugs/ vaccines according to services and reports 2.Ensuring supply of Kit A and Kit B biannually through Developing PHC wise logistics route map

	emergency suuply Irregular supply of drugs		APHCs for vaccine / drugs storage	2.1 Hiring vehicles for supply of drug kits through untied fund. 2.3 Developing three coloured indenting format for the APHC to PHC(First reminder-Green, Second reminder-Yellow, Third reminder-Red) 3.1 Hiring of couriers as per need 3.2 Payment of courier through APHC account 4.1 Purchasing of cold chain equipments as per IPHS norms 4.2 training of concerned staffs on cold chain maintenance and drug storage
Service Performance	RKS has not been formed at all the APHC. No institutional delivery at APHC level No inpatient facility available No ANC, NC, PNC No regular Family Planning available No lab facility 5 Ayush practitioner is not posted No rehabilitation services No safe MTP service No OT/ dressing and Cataract operation services. Approx 80% of APHC staffs not	Formation of RKS Operationalization of Untied fund. Improvement in quality of services like ANC, NC and PNC, Immunization and other services as identified as gaps. Integration of disease control programs at APHC level. Family Planning services Convergence Operational issues	Capacity building of account holder of untied fund Phase wise strengthening of 9 APHCs for Institutional delivery and fix a day for ANC as per IPHS norms. Implementation of disease control programs through APHC level where APHC will work as a resource center for HSCc. At present the same is being done by PHC only.	1.Training of signatories on operating Untied fund /RKS account, book keeping etc 2. Assigning PHC RKS accountant for supporting operationalization of APHC level accounts 2. Timely disbursement of untied fund/ seed money for APHCs RKS. 3. 1 Gap identification of 36 APHCs through facility survey 2.strengtheing one APHC per PHC for institutional delivery in first quarter 3.Ownering first delivered baby and ANM 1 Review of all disease control programs APHC wise in existing Tuesday weekly meetings at PHC with form 6 2.Strengthening ANMs for community based

	reside at place of posting Lack of counseling services Problem of mobility during rainy season. Lack of convergence at APHC level		Community focused Family Planning services PPP Convergence	planning of all national disease control program 3. Reporting of disease control activities through ANMs 4. Submission of reports of national programs by the supervisors duly signed by the respective ANMs. 5.Weekly meeting of the staffs of concerned HSCs (as assigned to the APHC) 1.Eligible Couple Survey 2. Ensuring supply of contraceptives with three month's buffer stock at HSCs. 3. training of AWW/ASHA on family planning methods and RTI/STI/HIV/AIDS 4. Training of ANMs on IUD insertion 1.Outsourcing services for Generator, fooding, cleanliness and ambulance
				1. Fixed Saturday for meeting day of ANM, AWW, ASHA,LRG with VHSCs rotation wise at all villages of the respective HSC.

PRIMARY HEALTH CENTRE

Primary Health Centers:(30 bedded)				
Indicators	**Gaps**	**Issues**	**Strategy**	**Activities**
Infrastructure	All PHCs are running with only six bed facility. At present 5 PHC are working with average 50 delivery per day, 1 inpatient Kala-azar, and 140 OPD per day in each PHC. This huge workload is not being addressed with only six beds inadequate facility. Identified the facility and equipments gap before preparation of DHAP and almost 50-60% of facilities are not adequate as per IPHS norms. The comparative analysis of facility survey(08-09) and DLHS3 facility survey(06-07) , the service availability tremendously increased but the quality of services is still area of improvement. Lack of equipments as per IPHS norms and also under utilized equipments. Lack of appropriate furniture Non availability of HMIS formats/registers and stationeries Operation of RKS:	Available facilities are not compatible with the services supposed to be delivered at PHCs. Quality of services Community participation.	Upgradation of PHCs into 30 bedded facilities. ISO certification of selected PHCs in the district. Strengthening of BMU Ensuring community participation. Strengthening of Infrastructure and operationalization of construction works Monitoring	1.Need based (Service delivery)Estimation of cost for upgradation of PHCs 2.Preparation of priority list of interventions to deliver services. 1.Selection of any two PHCs for ISO certification in first phase. 2. Sending the recommendation for the certification with existing services and facility detail. 1. Ensuring regular monthly meeting of RKS. 2. Appointment of Block Health Managers, Accountants in all institutions 3. Training to the RKS signatories for account operation. 4. Trainings of BHM and accountants on their responsibilities. 1.Meeting with Community representatives on erecting boundary, beautification etc,

	Lack in uniform process of RKS operation. Lack of community participation in the functioning of RKS. Lack of facilities/ basic amenities in the PHC buildings			2. Meeting with local public representatives/ Social workers and mobilizing them for donations to RKS. **3.Strengtheing of PHCs** 1Rennovation of PHCs 2 Purchase of Furniture 3 Prioritizing the equipment list according to service delivery and IPHS norms. 4 Purchase of equipments 5 Printing of formats and purchase of stationeries 1. Biannual facility survey of PHCs through local NGOs as per IPHS format 2. Regular monitoring of PHC facilities through PHC level supervisors in IPHS format.
Human Resource	As per IPHS norms each PHC requires the following clinical staffs General Surgeon Physician Gynecologist Pediatrics Anesthetist Eye surgeon As per IPHS norms each PHC requires the following para medical support:(List attached) But the actual position	staff shortage Untrained staffs	Staff recruitment Capacity building	1.Selection and recruitment of Doctors 2.Selection and recruitment of ANMs/ male workers 3.Selection and recruitment of paramedical/ support staffs 1.Training need Assessment of

	is Nurse midwife (A Grade) 62/135 Dresser 3./42 Pharmacist/compounders 3/46 Lab technician 15/37 Ophthalmic assistant 2/9			PHC level staffs 2.Training of staffs on various services 3.Trainings of BHM and accountants on their responsibilities. 4. Trainings of BHM on implementation of services/ various National program programs.
Drug kit availability	Irregular supply of drugs because of lack of fund disbursement on time. . Lack of fund for the transportation of drugs from district to blocks. There is no clarity on the guideline for need based drug procurement and transportation.	Indenting Logistics Operationalization	Strengthening of reporting process and indenting through form 7 Strengthening of drug logistic system	1.training of store keepers on invoicing of drugs 2.Implementing computerized invoice system in all PHCs 3.Fixing the responsibility on proper and timely indenting of medicines(keeping three months buffer stock) 4. Enlisting of equipments for safe storage of drugs. 5. Purchase of enlisted equipments. 6. Ensuring the availability of FIFO list of drugs with store keeper. 7. Orientation meetings on guidelines of RKS for operation.
Service	1.Exessive load on PHC	Optimum	Quality	1. Hiring of

Performance	in delivering all services i.e. 10 delivery per day, 1 inpatient Kala-azar, 10 FP operation/emergency operation and 140 OPD per day in each PHC. 2. Total 64 seats of Regular and 23 seats of contractual doctors in the district is vacant. 3. All posted doctors are not regularly present during the OPD time so the no of OPDs done is very less(only average 20 patients per Doctor per OPD days during April08-Nov 08, however the IPHS norms says that the OPD should be 40 per Doctor.) 4. five PHCs provides 24 hrs BEmoC services. 6. None of the PHC provides 24 hour blood transfusion servic 8. No any PHC provides adolescent sexual and reproductive health services. 9.Health facility with AYUSH services is not being provided 10. Referal a. No pick up facility for PW or patients. b.BPL patients are not exempted in paying fee of ambulance. c. Lack of maintenance of ambulances d. Shortage of ambulances 11. Quality of food, cleanliness (toilets,Labour room, OT, wards etc) electricity facilities are not satisfactory in any of the PHC. 12. In serving emergency cases, there are	Utilization of Human Resources Epidemic outbreaks and Need based intervention in epidemic areas. Service Load centered at PHC Availability of AYUSH pathy. Insecurity (Staff and Properties)	improvement in residential facility of doctors/ staffs. Recruitment Proper and timely information of outbreaks Strengthening of equipments and services and increase in the number of ambulances. Strengthening of AYUSH services	rented houses from RKS fund for the residence of doctors and key staffs. 2. Incentivizing doctors on their performances especially on OPD, IPD, FP operations, Kalaazar patients treatment. 3. Revising Duty rosters in such a way that all posted doctors are having at least 8 hrs assignments per day 1.Selection and appointment of contractual doctors and staffs 1. Mapping of the areas having history of outbreaks disease wise. 2.Developing micro plans to address epidemic outbreaks 2.Assigning areas to the MOs and staffs 3.Motivating ASHA on immediate information of outbreaks 4. Purchasing folding tents, beds and equipments and medicines to organize camps

	maximum chances of misbehave from the part of attendants, so staffs reluctant to handle emergency cases. 13. Several cases of theft of instruments, computers, and submersible pumps etc at PHCs. 14. No guidance to the patients on the services available at PHCs. 15.Non friendly attitude of staffs towards the poor patients in general and women are disadvantaged group in particular. 16. Lack of inpatient facility for kala-azar patients. 17.Lack of counseling services 18.Problem of mobility during rainy season 19.Lack of convergence 20. Lack of timely reporting and delay in data collection	Govts existing services like lab, x-ray, generator, fooding and cleanliness services.	at PHC level in the first level. Confidence building measures Strengthening of the Govts existing services like lab, x-ray, generator, fooding and cleanliness services. Creating friendly environment HMIS and strengthening of reporting process	in epidemic areas. 1. Repairing of all defunct Ambulances 2. Repairing of PHCs gensets and initiating their use. 3. Hiring of ambulances as per need. 1. Appointment of one AYUSH practitioner and Yoga teacher in every PHC 1.Insurance of all properties and staffs of PHC 2.Placing one TOP in every PHC 1. Assigning mothers committees of local BRC for food supply to the patients in govt's approved rate. 2.Recruitment of lab technicians as required 3. Purchase of equipments/ instruments for strengthening lab. 4. Hiring of menial workers for cleanliness works. 1. Assigning LHV for counseling work 2. Wall writing on every section of the building

				denoting the facilities 3. Name plates of doctor 4. Displaying Roster of doctors with their details. 5. Gardening 6. Sitting arrangement for patients 7. Installation of LCD TV with cable connection 8.Installation of safe drinking water equipments/water cooler, 9.Installation of solar heater system and light with the help of BDO/Panchayat 9. Apron with name plates with every doctors 10. Presence of staffs with uniform and name plates. 1.Orientation of the staffs on indicators of reporting formats 2.Puchase of Laptops for DPMs and BHMs

Infrastructure facilities at PHC

Araria District has 09 PHC/Referral. All the PHC function from their own building. The source of water for all PHC is overhead tank and hand pump.

All the facilities have electricity in all parts of the hospital. all PHCs, Referal Hospital and SDH Araria have operations theatres and Ambulance. Generator and Telephone is available in all PHCs.

None of the facility has OPD facilities for RTI /STI. OPD facility for gynecology/obstetric is not available.

There are facilities for privacy in all PHC, for sterilizing instruments is available in 09 PHC while facility for counseling is available in none of the facilities. There is blood storage cnter available in the district H.Q and SDH Forbesganj.

Quarters for MOs & Paramedical staff in all PHC are inadequate and required immediate new construction renovation. Accommodation facilities for relatives or attendants of patients are not available in any PHC. Personal Computers are available in all PHC except Araria(R) PHC..

Specific staff training of medical officer in PHC

The post of obstetrician/ gynecologist is not filled in any PHC. The post of RTI/STI specialist is not filled in any of the facilities. The posts of laboratory technician, pharmacist and staff nurse are not full- filled and available in all PHC. The post of Health Assistant (Female) is filled and available in all PHC. There is no training on sterilization, MTP, RTI / STI since last 6 years in any PHC.

Availability of specific facilities in Additional Primary Health Centres

There are no facilities of toilet, water supply electricity, laboratory, vehicle, labour room in any APHC. Because, Bihar has Primary Health Centre, Additional Primary Health Centre and Health Sub Centre. But other state has CHC, PHC and HSC. In NRHM period Bihar Government has notified all the PHC has to be converted into CHC, and all the APHC converted into PHC. That's why; PHC is not according to IPHS norms.

Availability of specific facilities in District H Q level.

There is a Sadar Hospital in Araria district. The Sadar hospital has electricity supply, generator and a telephone. The hospital has toilet facility and a vehicle in working condition. There are facilities like laboratory and X-ray machine. There are separate indoor or outdoor departments in the Hospital. Beds, pillows, bed sheets, delivery table and

examination table are available as per norms. There is an independent 01 Sub-Divisional Hospital, 09 Primary Health Centre (PHC)/Referral and 32 APHC in the district. The all facilities cover the entire about 29 lakhs population of the district.

Physical Infrastructure

a. Hospital Building

The SDH has a compound wall fencing all around. The SDH has its own building. The other facilities also operate from their own buildings.

b. Source of Water Supply

The source of water supply for the SDH is Over Head Tank/Hand Pump/ Tube Well. This is also the case with the other facilities surveyed, which have piped water, Overhead tank and pump are available at the SDH. Water supply and associated facilities are not adequate in all these facilities.

c. Electricity

Electricity is available in all parts in the facilities. The electricity supply to the DH is continuous. All the facilities have regular electricity supply. The generators available at both the SDH and 09 PHC are in working condition. It was reported that the capacity of the generators is sufficient as per the requirement at all these facilities.

d. Disposal of waste

SDH is disconnected to the municipal sewage. The other facilities surveyed do not have any sewage facility. The waste is not segregated as infectious/ non-infectious at any of the facilities. There is not any waste treatment plant in Sub. Div. Hospital compound, The biological wastes are buried in a pit need of incinerator in all the Health facilities of District.

e. Staff Quarters

It is found that quarters for both Doctors/MO and other staff are available but not sufficient. PHC of SDH and Referral Hospitals have quarters for the doctors / in-charge. None of the PHCs have staff quarters for gynecologists, /obstetricians, pediatrician, RMOs and anesthesiologists.

f. OPD Services

OPD facilities are available in the SDH, Other Referal Hospitals and PHCs. OPD facilities are found to be good in the Sadar hospital. It is observed that OPD services for gynecology /obstetric and RTI / STI are available in the SDH. OPD services are available in all Units very well.

g. Availability of Beds

The information about total number of in-patient wards is available in the SDH while the total numbers of beds are 100 but it will upgrade into 300 bedded District Hospital. All PHC have the number of beds being 6 respectively.

h. Man power and In-service Training

In the SDH, all the sanctioned posts of doctor in charge, gynecologist and obstetrician, pediatrician, pathologist, and anesthesiologist are not filled and available. There is gynecologist and obstetrician posted for few PHC.

Rationalisation Equipment – Gap, Procurement & Utilisation

It is also quitessential that equipments assessment is done to ascertain gaps. Smaller low cost equipment that is frequently replaceable must be dealt with as for consumables. Larger equipment, which is costlier and requires training to make operational needs to be purchased and deployed only as part of block and district level plans linked to service quality deliverables. This would ensure that there is no mismatch between equipment purchase and infrastructure, between equipment and skilled manpower available, between equipment and related consumables supply and that the purchase of equipment is linked to quality improvements in the package of services offered at this level.

Purchase can have the same policy of pre-qualification and price negotiation at the state level with districts then placing orders. The same empowered body which implements drug and supplies procurement and distribution may undertake all equipment purchase. Further such a body would ensure that adequate arrangements are made for maintenance and such arrangements are renewed.

Attention may be given to closing the gaps regarding water supply and power supply and to ensuring that separate toilets for staff as well as bating facilities for men and women are also in place in each of the PHC and other facilities. Inadequately recognized priority areas are waste disposal systems, drainage and sewerage all of which needs to be put into place in all APHC and PHC.

Major equipments like X-ray machines, ECG, Hemoglobin meters, surgical equipments, Boyle's apparatus are not available in all PHC. Auto clave, instrument sterilizers, microscopes, stethoscopes, BP apparatus, weighing machine, infant weighing machine, oxygen cylinders, ambu bags, emergency lamps, Deep freezers, ILR etc. are available but condition of most of the instruments are not up to the mark (Table annexed). All of them have the minimum necessary hospital furniture for the running of PHC. But the main problem is that they do not have any proper maintenance by the staff. There are many

instruments like the Ambu bags which are not very costly and can be replaced in a short notice. They were out because of irregular maintenance. X-Ray machines are also installed at Sub-Divisional Hospital and Referral Hospital Forbesganj, Raniganj.and Jokihat.

At the PHC level 100% are having BP apparatus, weighing machines, sterilizers, IV stands, scissors, and delivery tables. None of the PHC are having the binocular, blood cell calculator.

All the PHC should be provided with Blood Transfusion and other Hematological investigation and ECG facilities for complete, improved as well as ideal PHC. Regular servicing of the instruments needs to be done to make the PHC function at its optimum level. Training needs to be provided to the staffs regarding how to use equipments that are being provided to the PHC. Most of the staff does not know how to use them nor do they want to know. So these instruments provided never come out of the boxes and get destroyed with out even being used once.

At PHC level, there should be a provision for X-ray, laboratory and also transportation facilities like ambulance, jeeps, etc. PHC staff also needs to be trained how to use the instruments and what are they for. Even if they have the instruments, as they do not know what are they called or for what purpose they are used when generally asked they say they do not have the equipments

Contractual appointment of technicians for maintenance of major/minor equipments is proposed.

Training Need Assessment /Human resource development/ Capacity Building

Though regular trainings are provided under various national programmes to doctors, paramedical staff specially lab techs and MPWs, the quality of trainings are not Upto the level expected. So far the block level trainings are concerned, these are largely done like meetings and the lower level trainings go to even poorer results. Skilled team for training is another issue. This leads largely to logistics gaps and also affects the training quality and transmission sustenance. Thus the major focus should be training logistics and personnel. No any ANM training center located in District which imparts is months trainings to ANMs so that they retain what they have been taught.

The following additional trainings for various levels need to be imparted in 2011–12.

- Skilled birth attendant training for ANM, LHV and Grade “A” Nurse etc.

The capacity of participants needs to be further built up by exposure visits to model health institutions of other states as well. Apart from all the above mentioned trainings the staff at all levels should be constantly updated about the latest technology and developments. All the staff should be given regular training on how to use computers and instruments that are being regularly provided to them by the centre so that the dream of having completely functioning PHC, APHC, HSCs for 24 hours a day and 7 days a week comes true.

The goal of the training policy shall be attainment of a specified quality of care for a given facility. The same is applied for para-medicals as well as for medical officers. To achieve this goal we recommend an in-service training package with following features:

Multi-skilling for Paramedical

Training Roster: A roster of all MPWs and health supervisors should be maintained at the block and district level just for this purpose denoting last training attended topics and number of days of training in each.

Syllabus: The syllabus for it should be built up to include:

- Changes in health programme guidelines of national health programmes- best address through two day sensitization programmes, whenever such a change is made.
- Renewal of core area of their work – RCH programme for MPWs and national programmes for male workers.
- Multi skilling training in which female workers learn more about national programmes and about basic laboratory skills and male workers learn about RCH and adequate levels of basic laboratory skills.
- Adequate training for first contact curative care.
- A modified IEC training programme capability with focus on interpersonal and community mobilization skills along with better understanding of a multicultural and ethnically diverse society.

On-the job Training : The supervisors should be held responsible for on the job training of the health workers and periodic evaluation of knowledge and skill of health workers be used to ensure that they perform this task adequately, as they should be accountable for this in their juniors. The medical officers must be equipped to evaluate the supervisors on training in most areas and in some areas like basic laboratory services they should be capable of providing in-service training.

Integrate Training Funds: All training funds from various programmes are deployed in such a way that even as the objective of that grant is realized, the training goals the state has set itself is also advanced within that same space.

Training Cell: A training cell for in-service MOs, MPWs and supervisors training have constituted in the Institute of Public Health (IPH) that is constantly doing training needs assessment, training material development, master trainer training of district training centers, supervision of training roasters and training evaluation.

Trainings for Medical Officers

Continuing Medical Education: We recommend a continuing medical education scheme for medical doctors to upgrade their knowledge and skills. A continuing medical education scheme should be pursued as a very useful intervention strategy in health care delivery system.

Minimum Skill-Mix for PHC: Having defined a minimum package of services at the PHC as essential to meet public health goals one needs to a put in place a road map by which the desirable skill mix needed for delivering such a package of service would become a reality. We make the following suggestions in this regard.

- Decide on what skill mix is needed in each PHC and what the gaps are. The focus is on emergency obstetric care but the skill mix approach need not be confined to this alone.

- Draw up a schedule for providing short term trainings so that existing medical officers and specialists fill up the gaps with acquired basic skill sets other than in areas which their primary specialization. Thus a surgeon may also learn to do caesarean section or ENT and ophthalmic work, or a physician may learn pediatric functions and so on.

- Where gaps still remain one may use public private partnership to fill up the gaps.

Though regular trainings are provided under various national programmes to doctors, paramedical staff especially lab techs and MPWs, the quality of trainings are not Up to the level expected. So far the block level trainings are concerned, these are largely done like meetings and the lower level trainings go to even poorer results. Skilled team for training is another issue. This leads largely to logistics gaps and also affects the training quality and transmission sustenance. Thus the major focus should be training logistics and personnel.

Health Services:

There are 199 subcentres, 32 APHC and 09 PHC/ Referal Hospitals spread in the 09 blocks of Araria District. The OPD situation, bed occupancy and hospital management

related issues are not in a very good condition if compared to the potential and capacity of institutions. The quality of public health services has been described in concerned sections and here the analysis of the clinical services.

- APHC have yet to start function on a 24 hour basis though roasters in this view have been prepared in all facilities.
- ANMs availability in the headquarters still is an issue.
- Though contractual appointments are given, the no. of doctors is not adequate.
- Neonatal care is also a problem area needs improvement. Equipments and nursery facility provided to improve this also needs to be properly installed and used in concerned facilities.
- The management of severe and acute malnutrition is not at all taking place.
- Supervisors are neither in sufficient number nor trained enough for supervising the work of the ANMs.
- In many places post of sector supervisors are vacant and needs to be fulfilled
- ANMs are not provided with stationery by the concern units
- Supervisors also complaint that they are not provided any stationery from the block headquarters and they are purchasing stationery on their own expenses.
- There is no system of checklist to get the actual data from ANMs for reporting.
- The complete system of monitoring the current status of the health needs to be redefined.
- The geographical constraint is the main constraint in reaching 100% immunization.
- The distance between most of the to lac is greater compared to those villages in the plain areas.
- ANM/MPWs are overburdened with work due to the shortage of staff which needs attention from the district / State authorities.
- Most of the ANMs either travel by cycle or they merely walk due to lack of proper communication due to flood prone area..
- There is less coordination among ANM / MPWs, and AWWs.
- There is a greater gap of man power, infrastructure and equipment's at sub centers level due to which Sub-centers are not functioning with quality services.
- Continuing out of pocket expenditure by ANM on stationary and travel with lack of adequate arrangements for facilitating mobility also effects the proper functioning of the sub centers.
- Continuing gaps in the cold chain maintenance and supply of disposables needed to improve quality in immunization.

Creating Conducive environment: Service condition

(Transfer, promotion; financial burdens; Personal Security Accommodation for staff)- The lack of a transparent fair system of transfer is easily one of the greatest causes of workforce dissatisfaction and demoralization. Some staff spends their lifetimes working

in remote areas seeking and never getting a transfer whereas others perceived to be able to personally and unfairly influence decision making get plum postings throughout their careers. This makes less staff willing to serve in rural areas and when they are so posted do their task with such a deep-rooted sense of frustration and anger that the quality of the work suffers. The problems of doctors not willing to serve in rural areas should be seen only in this context and should not even be raised against the medical profession unless a basic transfer policy has been put in place.

Promotions need to be regular and timely and fair. There have been almost no promotions for the last three years in this state. This has led to situation of deep dissatisfaction that runs through the entire department. It has also meant that all positions of authority starting from the top most and preceding through the CMO up to the BMOs are held in an adhoc and arbitrary manner. Further the opportunities for an active career plan for a talented doctor or one who is able to work is able to work hard and perform more are absent. Considerable possibilities for non-medical and even non-service incentives that can be given to a doctor have bee left unexplored. For paramedical staff too the lack of any possibility of a promotion let alone a career acts as a great demotivation from taking any initiative. These are all remediable aspects that need to be urgently attended to.

One nagging problem is the significant amount of expenditure that is being required to be spent out of pocket for staff, especially junior most staff, for what are clearly official functions. The main problems relate to travel allowance and stationary. This needs to be remedied at once, starting with stationary expenses of MPW females.

Another major problem is personal security, again a problem maximum with MPW females. Violence and sexual harassment, covert and overt affects about 10% but creates a sense of insecurity in all.

Another basic service issue is accommodation. At no level is there adequate housing for all staff. The focus has been on developing government housing for doctors first. At the PHC level there is no accommodation available for doctors and other categories of staff. In many of these locations, availability of basic quality rental accommodation is also a problem.

Laboratory Services

Laboratory services at the sub-centre are absent. By norms four basic tests-Blood pressure, weighing of pregnant women and children, blood hemoglobin estimation and urine testing for sugar and albumen (also ESR) are expected to take place here. These above tests however should do take place infrequently in APHC but even here they are not regular. That the PHC, as per norms, has a basic laboratory which can do about 20 basic diagnostic tests has almost been forgotten within the system. Even microscope availability

is low. In the last three years there has been considerable movement forward in this area through Out Sourcing.

In PHC the laboratory is active but performs almost exclusively two tests, the blood smear examination for malarial parasites and sputum examination for AFB. The list of desirable diagnostics at the PHC level is over 40 tests. Where PHC are active the workload of these two tests are heavy (as no tests are being don at sector level) and this crowds out the possibility of doing any other laboratory investigations except the four that are to be done at the HSC level. Also as a consequence, the 'smear taking to report reaching back' time gets lengthened considerably (on an average 15 days to a month). With such delay this entire workload on the laboratory brings no additionality to health service outcomes. The blood smear examination has increasingly taken the form of a "modern" ritual denoting medical care devoid of content.

There is no major perception of the lack of laboratory services as serious lacunae – again reflecting on the weaknesses in understanding and lack of emphasis of quality issues in medical care.

Referral Services

The current referral services have two forms. Firstly there is a fund placed at the disposal for use hire / pay for transport to shift needy patients to hospital. There is an understanding that this must be used for high risk and complication of child birth. Fund flow and even awareness of this provision in panchayat is low and because of other structural constraints lack of vehicle, inability to call vehicle in time etc) its utilization is very low even as the need for referral goes unanswered.

The other referral is the patient asked orally or with a slip to go seek treatment at a higher centre. This brings no advantage to patient or to the system and is perceived by patient as the referring facility having deliberately or otherwise failed to deliver its services. There no clear norms for what is to be referred and when and there are no mechanisms to monitor referral to reduce unnecessary referral and insist on necessary ones. There is no feedback of any sort. In sort there is no "referral system" in place.

Preventive services:

This being the most important aspect of disease control, a lot of stress has to be laid on it. All the staff of the MMU should be trained on the preventive strategies for the control of various diseases. MMU staff has to be identified, trained and assigned the duty of propagating this preventive aspect. Preventive strategy should be in tandem with the IEC/Advocacy being undertaken and it should be a flow of information, starting from basic information of the disease and its treatment modalities in IEC and ending with the preventive aspect of the disease.

- Diagnostic services:
- Laboratory based
- Complete Blood Count
- Routine Urine examinations
- Urine examinations for sugar and Albumin
- Stool examinations.
- Peripheral smear for Malaria / Kala Azar.
- Laboratory based diagnostic and surveillance procedures for Leprosy and other endemic diseases should also be made available.
- Sputum examinations should be carried out for diagnosis and monitoring of treatment under RNTCP.
- Facilities for diagnosis/ collection centre for the investigations of HIV/AIDS infection shall be made available.
- Radiological investigations (optional, to be need based and decided locally)
- A portable X-ray machine.
- Portable Ultrasonography equipment.
- Portable ECG machine (optional, to be need based and decided locally)
- Screening for breast cancer, cervical cancer (optional, to be need based and decided locally).
- Basic facilities for diagnosis ophthalmic anomalies/deficiencies (optional, to be need based and decided locally).
- Clinical services:
- Maternal health- Outreach Gynecological health care services
- ANC services
- Minimum 3 ANC check-ups.
- Prophylaxis of iron and folic acid.
- Tetanus Toxoid immunization.
- Early detection of complicated pregnancy.
- Counseling and referrals for institutional delivery.
- Child health
- Outreach pediatric health care services.
- Management of Diarrhoea and dehydration.
- Management of malnutrition.
- Monitoring of growth of under five year olds.
- Routine immunization.
- Family planning and Reproductive health services
- Clinical FP services- Cu-T, Injectables, Sterilizations (optional).

- RTI/STI management.
- Counseling on Various family planning initiatives/ methods (Natural- LAM, Safe period etc. and Modern- Condoms, Oral pills etc)
- Adolescent health issues
- Breast feeding
- First Aid and Minor Surgical procedures.
- Drug Distribution centre for various treatment modalities available under NRHM and State health initiatives.
- Specialized health care services (optional, to be need based and decided locally)
- Pediatrics / Orthopedic / Skin and STD /Ophthalmic /Psychiatric/Cardio-thoracic
- Ear Nose Throat disorders

Pharmacy services:

Referral and Transportation services

Linkages to be developed with Institutional health care providers from the public as well as private sector. MMU should also act as a means of transportation for cases requiring Institutional care.

Emergency Care Services

MMU shall be in the forefront of the support and care required during disasters/epidemics/public health emergencies/accidents etc. MMU will have a preformed action plan with duties delegated to each of the staff to cope up with such emergencies.

Telemedicine

(optional, every district should aim at establishing this facility as a part of scaling up of the outreach activities) This initiative shall help reduce the time lapse between diagnosis and treatment. To be linked with the local Medical College, where a technical hub shall be created.

Maternal Health Care

Women are the foundation of the Country's families and communities. Over the years, Complications of pregnancy and childbirth are the leading cause of death and disability for childbearing women in many parts of the country. Comprehensive, high-quality maternity

care can help prevent infant and maternal death and disability. No matter where they live, women should have access to the information and care that keeps them healthy and safe. Engender Health has learned that when women have access to family planning, fewer women die from risky pregnancies or unsafe abortions. Our work safeguards women's health.

Engender Health works with partners to develop practical strategies to strengthen and integrate maternal health care services into national health systems.

In the district young girls inter the reproductive phase of their like as victims of under nourishment and anemia. Their health risks increase with early marriages, frequent pregnancies and unsafe abortions choices regarding marriage, child bearing and contraception are denied to women. There is also lack of access to functional reproductive health services and most deliveries are still carried out by untrained birth attendants especially in the rural areas where there is no effective system of referral or management in case complications arise through there has been widespread increase of infrastructure service in the district during the past years, access to these facilities is still varied.

The immediate causes of maternal mortality are well known. They are sepsis, hemorrhage, obstruction, anemia, toxemia and unsafe abortions. The larger social determinants of these are also equally well known – they include educational status of women, poverty levels, social inequities and access to quality care.

It is evident that all the health / health service indicators of Araria district are as lower as compared to that of Bihar CDR, MMR IMR , Immunization, Institutional Delivery and Safe delivery is not better than Bihar State. However efforts in terms of quality and service need to be taken for the betterment of the present indicators. Service utilization is not good in Araria district. In urban areas, there is no any Urban Health Centre in the Araria district. In this reason, the slum population is neglected for proper immunization, Institutional Delivery and Safe delivery.
Field observations show that the blocks Narpatganj, Bhargama andSikti are lagging with respect to no. of institutional deliveries due to lack of staff, proper health facilities as well as they are unreachable areas. Further the no. of maternal deaths in that block are much more as compared to other blocks as these are non tribal belts, far-away sub-centers, unapproachable areas etc.

Constraints:

- Health workers are not able to do 100% pregnancy registration due to different reasons such as unreachable areas, personal reasons, illiteracy etc.
- No proper follow-up by workers of ANC cases and monitoring by supervisors, sector doctors etc
- No proper referral service
- Lack of awareness among rural masses / low IEC activities

- Improper access quality antenatal, natal and post natal services may be due to
- Lack of nurse (refers to female MPW or ANM) for providing quality ante-natal care at an appropriate time in vicinity of her home.
- Lack of skilled birth attendant in vicinity of home (trained midwife, nurse or doctor).
- Lack of facility providing institutional delivery on a 24 hour basis:
- The Sub-Centre is not usually a site for institutional delivery. 75% approxof sub centres the lack of buildings rules it out as an option. Equipment gaps may also contribute to poor service.
- Lack of transport facilities
- The post-partum mother and the neonate require a visit by a ASHA in the first day after birth and at least once more in the first week of the neonate's life. Given geographical constraints it is not possible for the ANM to do so. Only a trained community level care give like the ASHA can do so.
- Sometimes the nurse is there and resources are not a problem but there is a poor motivation to provide services or a reluctance to accept services even when the knowledge and attitudes are alright. These gaps are cultural gaps and represent a certain passive discrimination – of caste or creed, or of gender.

The following matrix highlights the indicators that are taken into consideration to achieve the objectives of reproductive and child health. For each indicator current status has been assessed and targets have been set that are to be achieved in the period present year plan . In order to attain the set goals certain strategies are laid out against each indicator.

ASHA

Accredited Social Activist (ASHA) is a key strategy of the NRHM to link the community with the health systems. ASHA works with the community to raise awareness about various health programmes, provide basic health knowledge, and provide information on health practices thus generating demand for health services. She also helps and supports the community to access health services. Proper selection and training of ASHAs is a crucial step for the success of NRHM. In Araria ASHAs have been selected in all the blocks. In most of the blocks ASHAs have completed two rounds of training, while in some of the blocks they have completed one round of training. Salient information related to ASHAs in the district can be found in the matrix below:

Situation analysis:

Out of a total target 2376 ASHAs for the District, 2306 have already been selected. The number of ASHAs to be selected has been determined on the basis of older population estimates. Given that the current estimate of district rural population is approx 30 lakh . The total number of ASHAs required at the norm of 1 for every 1000 population is 2900 while sanctioned number is 2376 given by SHSB.

Activities

- Submission of proposal for the sanction and selection of additional ASHAs
- Development of an IEC campaign on the role of the ASHA using print and folk media by Block Health Educators.
- Building partnerships with NGOs for conducting an IEC campaign on the ASHA programme.
- Monitoring of the IEC Campaign by Block Community mobilizer.
- Determining the community based selection and review process for ASHAs by DHS.
- Partnership with NGOs for implementing the community based selection and review process
- Monitoring of NGO partnership for community based selection and review of ASHAs by Block Health Educators.

Strategies

- Sanction of additional ASHAs
- Facilitate selection through a community process focused on creating awareness about the role of the ASHA as a community mobiliser and activist and her positioning as a representative of the community.
- Community based review of existing ASHAs for performance and replacement of non-functional ASHAs.
- Partnership with local, active voluntary organizations with a background in community health work in the community based selection and review process.

ASHA Training

Situation Analysis: Out of 2306, 2026 ASHAs have received the first round of training.

Strategies

- Conducting 12 days of camp based training for all ASHAs

Supportive Supervision Activities

- Monthly cluster level meetings of ASHAs, ANMs, AWWs, VHSC members and ASHA trainers.
- Monthly block level trainer's meeting

- Monthly district level trainer's meeting
- Development of simple monitoring formats to be filled out by ASHA trainers, and District Resource Persons to review the functionality of the programme
- Organising an ASHA mela every year at the District level to create a sense of solidarity and support amongst ASHAs
- ASHA Helpline to be managed by the ASHA helpdesks

Selecting active ASHAs with leadership qualities to be ASHA trainers

Strategies

- Timely release of monetary incentives to ASHAs

Instituting social incentives for ASHAs

Activities

- Advertising for an ASHA coordinator at the district level

Recruitment of ASHA coordinator Health educators at the block level to support in ASHA training

RKS AND UNTIED FUND

Rogi Kalyan Samitis & Untied Funds for Health Sub-Centre, APHC & PHCs

"Health Sub Centre"

Strategies

- Ensuring that HSCs receive untied funds

Activities

- Opening Bank Accounts
- Ensuring timely release of funds to HSCs

"Additional Primary Health Centre"

Strategies

- Ensuring that all APHCs receive untied funds as per the NRHM guidelines

Activities

- Ensuring that all APHCs receive untied funds as per the NRHM guidelines

"Primary Health Centre"

Strategies

- Ensuring timely release of funds to HSCs
- Ensure that RKS is registered in all PHCs.
- Ensure UCs are sent regularly.

- Utilisation of RKS funds to pay for outsourced services
- Ensuring that HSCs receive untied funds
- Opening Bank Accounts

Activities

- Training of RKS office bearers on documentation of meetings as well as of the potential of the RKS
- Training of block level accountants in preparation of the utilization certificates
- Monthly review meeting of block level accountants by District Accounts Manager to strengthen the documentation process
- Developing a check list for review

IMMUNIZATION

Objectives

- 100 % Complete Immunization of children (12-23 month of age)
- 100 % BCG vaccination of children (12-23 month of age)
- 100% DPT 3 vaccination of children (12-23 month of age)
- 100% Polio 3 vaccination of children (12-23 month of age)
- 90% Measles vaccination of children (12-23 month of age)
- 100% Vitamin A vaccination of children (12-23 month of age)

Activities

- Organising regular routine immunisation training for ANM and AWW and IPC/IEC/BCC trainings for ASHA and AWWs.
- Organising immunisation camps at every Sub centre level on every Wednesday and at the AWCs on every Saturday.
- Regular house to house visits for registration of pregnant women for ANC and children for immunisation.
- Developing tour plan schedule of ANM with the help of BHM and MOIC.
- Timely payment to MOICs to arrange transportation of vaccines from district hospital to PHCs.
- Regular disbursement of funds from the DIO to MOs for providing incentives to ANMs.
- Regular disbursement of funds for ANMs to provide incentives to AWWs and ASHA workers.
- Providing per diem for health workers, mobilisers, supervisors and vaccinators and alternative vaccinators.
- Maintaining the disbursement records.
- Visits by MOIC, CDPO, BHM, LHV and health educator to monitor the progress of immunisation schedule and prepare report.

- Ensuring the unrestricted movement of the monitoring team with fuel for vehicle and funds for hiring of the vehicle.
- Maintaining continuous power supply at PHC level for maintaining the cold chain.
- Applying for acquisition of ILR and deep freezer for the 1 PHCs which do not have ILR at present.
- Applying to State Heath society for the funding for Vaccine van to get timely stock of vaccines for the districts.
- Timely and regular requests from district to state as well as blocks to district to replenish the supply of DPT and syringe.
- Rationalisation of courier rates and making request to the SHS for increased funding for courier in order to ensure timely supply of vaccines to sub centres.
- Reviewing the contract of Voltas Cooling Company, currently responsible for repair and maintenance.
- Submitting a proposal to the state health society to acquire power of issuing maintenance and repair contract for cold chain equipment from district.
- Procure stock of hub cutters for all the PHCs for safe disposal of needles and syringe.

IEC/BCC

Situation Analysis

- There is lack of awareness and good practices amongst the community due to which they neither avail the services nor take any positive action. There is lack of awareness regarding the services, schemes including the Fixed Health days.

The following issues need special focus:

- Importance of 3 visits for ANC, advantages of institutional delivery, Post natal care.
- Availability of skilled birth attendants, balanced diet during pregnancy, anaemia, misgivings about IFA, kitchen garden.
- Importance of complete immunization, disadvantages of drop outs, nutritional requirements of infants and children, malnutrition, exclusive breastfeeding.
- Problems of adolescents, drugs addiction, malnutrition, problems of sexuality, age at marriage, tendency to take risks in sexual matters.
- DOTS programme for TB, location of microscopy centres, cardinal symptoms of TB,
- High risk behaviour in the community in relation to water born diseases, heart diseases and lung diseases, and HIV/AIDS, STDs
- Evil of drugs addiction affecting adolescents,
- High prevalence of RTIs, including STDs,
- Issues of malaria spread and prevention and also other diseases
- JSY, Fixed Health days, availability of services.
- The personnel have had no training on Interpersonal communication

Objective

- Widespread awareness regarding the good health practices
- Knowledge on the schemes, Availability of services

Strategy

- Information Dissemination through various media,
- Interpersonal Communication.
- Promoting Behaviour change.

Activity

- Awareness on Fixed MCHN days
- Designing of BCC messages on exclusive breast feeding and complimentary feeding, ANC, Delivery by SBA, timely referral, PNC, FP, Care of the Newborn,
- Gender, hygiene, sanitation, use of toilets, male involvement in the local language.
- Consistent and appropriate messages on electronic media – TV, radio.
- Use of the Folk media, Advertisements, hoardings on highways and at prominent sites.
- Training of ASHA/AWW/ANM on Interpersonal communication and Counselling on various issues related to maternal and Child health.
- Display of the referral centres and relevant telephone numbers in a prominent place in the village.
- Promoting inter-personal communication by health and nutrition functionaries during the Fixed health & Nutrition days.
- Orientation and training of all frontline government functionaries and elected representatives.
- Integration of these messages within the school curriculum.
- Mothers meeting to be held in each village every month to address the above mentioned issues and for community action.
- Kishore Kishori groups to be formed in each village and issues relevant to be addressed in the meetings every month
- Meetings of adult males to be held in each village to discuss issues related to males in each village every month and for community action.
- Village Contact Drives with the whole staff remaining at the village and providing services, drugs , one to one counselling and talks with the Village Health & Water Sanitation Committee and the Mother's groups
- Developing Nirdeshika for holding Fixed Health & Nutrition days to be distributed to all MOs, ANMs, AWWS, LS, PRIs,
- Monthly Swasthya Darpan describing all the forthcoming activities and also what happened in the month along with achievements
- Bal Nutrition Melas 4 times at each Sub centre
- Wall writings.
- Pamphlets for various issues packed in an envelope.

PROGRAMME MANAGEMENT

Situation Analysis

The District Health Society have formed been registered in Jamui The Society is reconstructed and with these following members and the Deputy Commissioner as the Governing board President. The members are all the Programme Officers, Education, SDM, IMA president, ICDS, PWD. The Governing body meetings are held monthly under the chairmanship of the Deputy Commissioner. Although the DHS formed and meetings conducted regularly but still they are not focused on health issues and need proper training on planning and management.

Objective

- District Health Society to make functional and empower to plan, implement and monitor the progress of the health status and services in the district.

Strategies

- Capacity building of the members of the District Health Society regarding the programme, their role, various schemes and mechanisms for monitoring and regular reviews.
- Establishing Monitoring mechanisms.
- Regular meetings of Society.
- Bimonthly meetings of Health, ICDS and PHED (as role of water and sanitation will play an important role in providing better health)

District Programme Management Unit

Status

- In NRHM a large number of activities have been introduced with very definite outcomes. The cornerstone for smooth and successful implementation of NRHM depends on the management capacity of District Programme officials. The officials in the districts looking after various programmes are overworked and there is immense pressure on the personnel. There is also lack of capacities for planning, implementing and monitoring. The decisions are too centralized and there is little delegation of powers.
- In order to strengthen the district DPMU, Four skilled personnel i.e. District Programme Manager, District Account Manager, District Nodal M&E Officer,

District planning coordinator, District Data Assistant ASHA have being provided in the district.

- These personnel are there for providing the basic support for programme implementation and monitoring at district level under DHS.

- The District Programme Manager (DPM) is responsible for all programmes and projects in district under the umbrella of NRHM and the District Accounts Manager (DAM) is responsible for the finance and accounting function of District Health Society including grants received from the State Health Society and donors, disbursement of funds to the implementing agencies, preparation of submission of monthly/ quarterly/ annual SOE, ensuring adherence to laid down accounting standards, ensure timely submission of UCs, periodic internal audit and conduct of external audit and implementation of computerised FMR.

- The District Nodal Monitoring and Evaluation Officer (M&E Officer) has to work in close consultation with district officials, facilitate working of District Health Society, Maintain records, Create and maintain district resource database for the health sector, Inventory management, procurement and logistics, Planning, monitoring & evaluation, HMIS, data collection and reporting at district level.

- There is a need for providing more support to the Civil Surgeon office for better implementation especially in light of the increased volume of work in NRHM, monitoring and reporting especially in the areas of Maternal and Child Health, Civil works, Behaviour change and accounting right from the level of the Sub centre.

- The Civil surgeon's office is located in the premises of the Sadar Hospital in the district. The office of all the Deputy Civil Surgeons is also in Sadar Hospital premises.

Activities

- Support to the Civil Surgeon for proper implementation of NRHM through proper involvement of DPMU and more consultants for support to civil surgeon for data analysis, trends, timely reports and preparation of documents for the day-to-day implementation of the district plans so that the Civil Surgeon and the other district officers.

- Finalizing the TOR and the selection process

- Selection of consultants, one each for Maternal Health, Civil Works, Child health, Behaviour change. If properly qualified and experienced persons are not available then District Facilitators to be hired which may be retired persons.
- **Capacity building of the personnel**

  - Joint Orientation of the District Officers and the consultants
  - Induction training of the DPM and consultants
  - Training on Management of NRHM for all the officials
  - Review meetings of the District Management Unit to be used for orientation of the consultants

Development of total clarity in the Orientation workshops and review meetings at the district and the block levels amongst all the district officials and Consultants about the following set of activities:

- Disease Control
- Disease Surveillance
- Maternal & Child Health
- Accounts and Finance Management
- Human Resources & Training
- Procurement, Stores & Logistics
- Administration & Planning
- Access to Technical Support
- Monitoring & MIS
- Referral, Transport and Communication Systems
- Infrastructure Development and Maintenance Division
- Gender, IEC & Community Mobilization including the cultural background of the Meows
- Block Resource Group
- Block Level Health Mission
- Coordination with Community Organizations, PRIs
- Quality of Care systems

Provision of infrastructure for officers, DPM, DAM, M&E Officer and the consultant of the District Project Management Unit. Provision of office space with furniture and computer facilities, photocopy machine, printer, Mobile phones, digital camera, fax, etc;

Use of Management principles for implementation of District NRHM

Development of a detailed Operational manual for implementation of the NRHM activities in the first month of approval of the District Action Plan including the responsibilities, review mechanisms, monitoring, reporting and the time frame. This will be developed in participatory consultative workshops at the district level and block levels.

- Financial management training of the officials and the Accounts persons. jurisdiction of the Civil Surgeon
- **Strengthening the Block Management Unit**: The Block Management units need to be established and strengthened through the provision of :
- Block Health Managers (BHM), Block Accounts Managers (BAM), Block Community Mobilizer ASHA and Data Operators (DO) for each block. These are hired on contract.
- Office setup will be given to these persons
- Accountants on contract for each PHC since under NRHM Sub centres have received Rs 10,000 also the village committees will get Rs 10,000 each, besides the funds for the PHCs.
- Provision of Computer system, printer, Digital Camera will be provided for BHM
- **Convergence of various sectors at district level**
- Provision of Convergence fund for workshops, meetings, joint outreach and monitoring with each Civil Surgeon
- **Monitoring the Physical and Financial progress** by the officials as well as independent agencies
- **Yearly Auditing** of accounts

Strategies

- Support to the Civil Surgeon for proper implementation of NRHM.
- Capacity building of the personnel
- Development of total clarity at the district and the block levels amongst all the district officials and Consultants about all activities
- Provision of infrastructure for the personnel

- Training of District Officials and MOs for management
- Use of management principles for implementation of District NRHM
- Streamlining Financial management
- Strengthening the Civil Surgeon's office
- Strengthening the Block Management Units
- Convergence of various sectors

MONITORING AND EVALUATION

Situation Analysis

Monitoring is an important aspect of the programme but it is not happening effectively and regularly. Each officer and the MOIC, MO, BHM at PHCs are supposed to make regular visits and monitor the progress and check on the activities and also the data provided by the ANMs. The reports have to be submitted and discussed in the monthly review meetings at the entire forum. The District Health Society is not monitoring the progress and neither are the committees at the Block and Gram Panchayat levels. No proper Check-lists exist for monitoring. Also analysis is not done of the visits and any data collected No Verbal Autopsies (Maternal, Neo-natal, Infant & Child Death audits) are carried out any levels. The Role & Functioning of the Sub centre level Committee, PHC level Committee, RKS at PHC and VLC need to be clearly defined. There is no system of concurrent Evaluation by independent agencies so that the district officials are aware regarding the progress and the lacunae.

Strategies

- Developing the system for visits, reporting and review
- Developing a system of Concurrent Evaluation

Activities

- Fixing the dates for visits, review meetings and reports.
- Development of Checklist for Monitoring.
- Software for the checklist and entry of the findings in the checklist.
- MOIC, MOs & BHM to make at least 5% facility visits and also of the villages.
- Quality assessment of all health institutions.
- Maternal Mortality Audit by MO and by involving ANM AWW for reporting of maternal deaths,
- Mobility for monitoring at all levels and with the use of district monitors.

SWOT ANALYSIS OF THE DISTRICT:

To identify the strength, weakness, opportunities and threats of districts a workshop was organized during the plan preparation process and suggestions were taken from different stakeholders from different sectors. The strategic planning workshops highlight the followings as SWOT in different sectors / sub-sectors.

District:

Strength	Weakness	Opportunity	Threat
➢ Suitable climatic condition for agriculture particularly for paddy, Jute, Wheat, Maize, Banana, Groundnut, Vegetables and also for Makhana, Mango, Bamboo betel leaf, etc. ➢ For most part of the soil is sandy and andy-loam with good fertility. ➢ The district has sufficient water resources both surface as well as ground water. ➢ A vast area available for non-agriculture economic activities and development work. ➢ Large amount	➢ It is a flood prone district and it has to suffer damages of life and properties on large scale caused by disastrous flush flood almost every year and during summer, cyclonic storms. ➢ The major rivers which are notorious for brining flood and causing excessive damages have no embankments to control and regulate the excessive flow of seasonal rain water which	➢ Araria being a potential producer of jute fiber, groundnut and Bamboo, which are not locally consumed, need strengthening communication network for transporting them in adjoining state and flung districts of the state. ➢ Development of market centres along with small sized godowns, construcation of all weather sheds, will help the local farmers for different agriculture produce. ➢ It being basically an agricultural district and having a large	➢ Flood is a recurring phenomenon in Araria. The flood menace begins to frighten the common people with the onset of monsoon every year and at the end of the monsoon we only disrupted and washed away roads, damaged crops, lost rural connectivity, mostly collapsed houses and sad faces of rural people. ➢ Power scarcity is a chronic phenomenon in the district which has grossly hampered the development, thriving of factories and mills and small and cottage industries run on

of wasteland and the land under water, which can be reclaimed and made fit for horticulture and cultivation. ➢ The district has enough potential for small and cottage industries based on Jute, Groundnut, paddy Milling, and Bamboo etc. ➢ The district abounds in cheap potential manpower for different economic activities.	have their catchment area in Nepal. ➢ Old and poor agro related technology and lack of modern agro related technical know-how. ➢ Poor rural connectivity and deplorable condition of existing roads. ➢ Very low literacy rate i.e. 35 % (avg.) when compared to State and National literacy rate which are 47.53 % and 65.38 % respectively. ➢ The district lacks in Technical institutes / Vocational institutes / Research institutes / Training institutes and Higher Educational	number of ponds and tanks, the formation and establishment of soil testing laboratory and fish farmer training centres would help in more producation of agricultural produce and development of pisciculture. ➢ The development of rural connectivity and the roads with bridges would enhance the employment opportunities, economic activities and would help to better the livings of the people in rural areas. Surface transport is essential also to provide market facilities to the SHGS formed under SGSY. ➢ The building of several schools arein bad shape, hence their construction and renovation are	electricity. ➢ Araria being a border district of Nepal has to confront with several types of offences and unlawful activities committed along the border such as smuggling, abduction and immoral traficking and cattle thievery etc. So the police administration needs to be strengthened, facilitated and suitably equipped with.

	institutions. ➢ The district has no Minerals, power plant, Factory. ➢ The district has no Developed agricultural market and marketing infra-structure. ➢ The district suffers from chronic power shortage and power based industry as well as industrial infra-structure.	important and are to be considered in this development plan. ➢ The district has no district hospital, having only one sub divisional hospital, so it needs up gradation and more facilities to be added to. ➢ The development of forest areas will reduce the soil erosion caused by severe flood every year, and would give the district a healthy environment.
